Supplementary Table 2

Q1 PBMC vs Tumor for each grade individually and in general: a. CD4 PBMC vs CD4 TILs b. CD8 PBMC vs CD8 TIL c. CD11b PBMC vs CD11b GIM	Q6 IDH wt vs IDH mut for each grade a. CD4 PBMC IDH wt vs CD4 PBMC IDH mut b. CD8 PBMC IDH wt vs CD8 PBMC IDH mut c. CD11b PBMC IDH wt vs CD11b PBMC IDH mut d. CD4 TIL IDH wt vs CD4 TIL IDH mut e. CD8 TIL IDH wt vs CD8 TIL IDH mut f. CD11b GIM IDH wt vs CD11b GIM IDH mut
Q2 Healthy donor vs Patient PBMC for each grade individually and in general a. CD4 PBMC patient vs CD4 healthy donor b. CD8 PBMC patient vs CD8 healthy donor c. CD11b PBMC patient vs CD11b healthy donor d. CD4 TIL vs CD4 healthy donor e. CD8 TIL vs CD8 healthy donor f. CD11b GIM vs CD11b healthy donor	Q7 Comparison GBM MGMT methylated (M) vs unmethylated (U) a. CD4 PBMC M vs CD4 PBMC U b. CD8 PBMC M vs CD8 PBMC U c. CD11b PBMC M vs CD11b PBMC U
Q3 Newly diagnosed GBM vs rec/2nd GBM a. CD4 PBMC newly vs CD4 PBMC rec/2nd b. CD8 PBMC newly vs CD8 PBMC rec/2nd c. CD11b PBMC newly vs CD11b PBMC rec/2nd d. CD4 TIL newly vs CD4 TIL rec/2nd e. CD8 TIL newly vs CD8 TIL rec/2nd f. CD11b GIM newly vs CD11b GIM rec/2nd	Q8 Steroids vs no steroids. a. CD4 PBMC steroids vs CD4 PBMC no steroids b. CD8 PBMC steroids vs CD8 PBMC no steroids c. CD11b PBMC steroids vs CD11b PBMC no steroids d. CD4 TIL steroids vs CD4 TIL no steroids e. CD8 TIL steroids vs CD8 TIL no steroids f. CD11b steroids vs CD11b GIM no steroids
Q4 Comparison between grade 2, 3 and 4 a. CD4 PBMC from each grade vs CD4 PBMC from each grade b. CD8 PBMC from each grade vs CD8 PBMC from each grade c. CD11b PBMC from each grade vs CD11b PBMC from each grade d. CD4 TIL from each grade vs CD4 TIL from each grade e. CD8 TIL from each grade vs CD8 TIL from each grade f. CD11b GIM from each grade vs CD11b from each grade	Q9 AA grade 3 vs Oligo grade 3 a. CD4 PBMC AA grade 3 vs CD4 PBMC Oligo grade 3 b. CD8 PBMC AA grade 3 vs CD8 PBMC Oligo grade 3 c. CD11b PBMC AA grade 3 vs CD11b PBMC Oligo grade 3 d. CD4 TIL AA grade 3 vs CD4 TIL Oligo grade 3 e. CD8 TIL AA grade 3 vs CD8 TIL Oligo grade 3 f. CD11b GIM AA grade 3 vs CD11b GIM Oligo grade 3
Q5 IDH wt vs IDH mut a. CD4 PBMC IDH wt vs CD4 PBMC IDH mut b. CD8 PBMC IDH wt vs CD8 PBMC IDH mut c. CD11b PBMC IDH wt vs CD11b PBMC IDH mut d. CD4 TIL IDH wt vs CD4 TIL IDH mut e. CD8 TIL IDH wt vs CD8 TIL IDH mut f. CD11b GIM IDH wt vs CD11b GIM IDH mut	Q10 Astro grade 2 vs Oligo grade 2 a. CD4 PBMC Astro grade 2 vs CD4 PBMC Oligo grade 2 b. CD8 PBMC Astro grade 2 vs CD8 PBMC Oligo grade 2 c. CD11b PBMC Astro grade 2 vs CD11b PBMC Oligo grade 2 d. CD4 TIL Astro grade 2 vs CD4 TIL Oligo grade 2 e. CD8 TIL Astro grade 2 vs CD8 TIL Oligo grade 2 f. CD11b GIM Astro grade 2 vs CD11b GIM Oligo grade 2

Supplementary Figure 1: Representative Flow Cytometry and Gating Strategy of

Immune Cells. After gliomas had been placed into a single cell suspension and had undergone myelin removal and Percoll gradient purification, single and viable cells were selected on the basis of forward (FSC) versus side scatter (SSC) parameters. Peripheral blood mononuclear cells were isolated from heparin blood from both glioma patients and healthy controls by density-gradient centrifugation and selected in an identical fashion. Immune cells populations were gated for myeloid (CD11b+) and T cells (CD3). The T cell populations were further refined on the basis of CD4 and CD8 expression. Examples are provided of the gates of each immune marker relative to its associated isotype control. Because CD11b represents a more heterogeneous immune cell population, the mean fluorescence intensity was used.

Supplementary Figure 2A

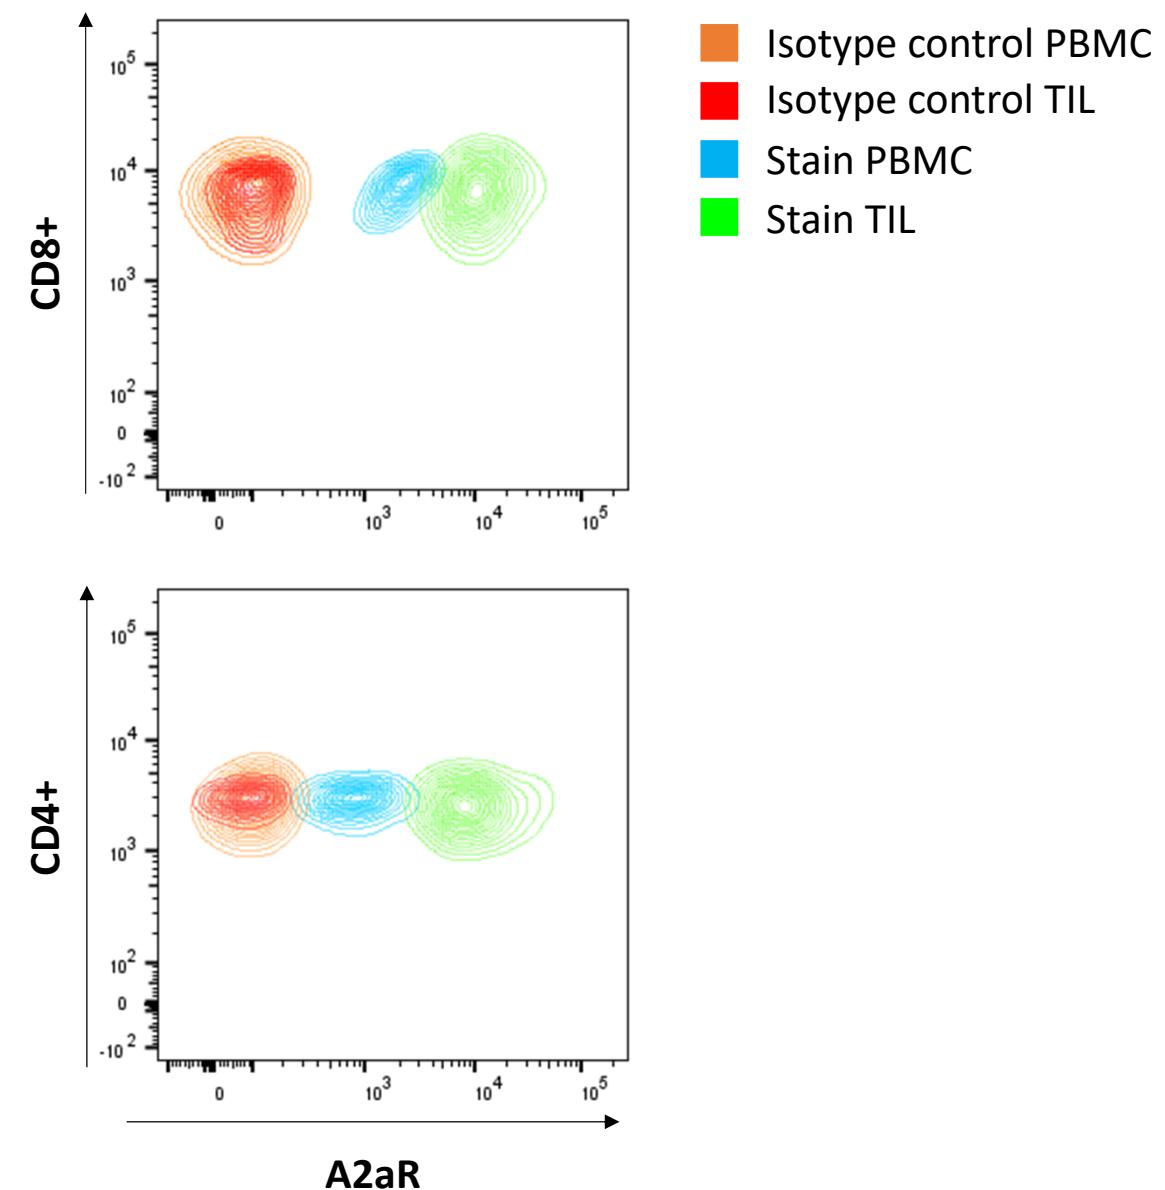

Supplementary Figure 2B

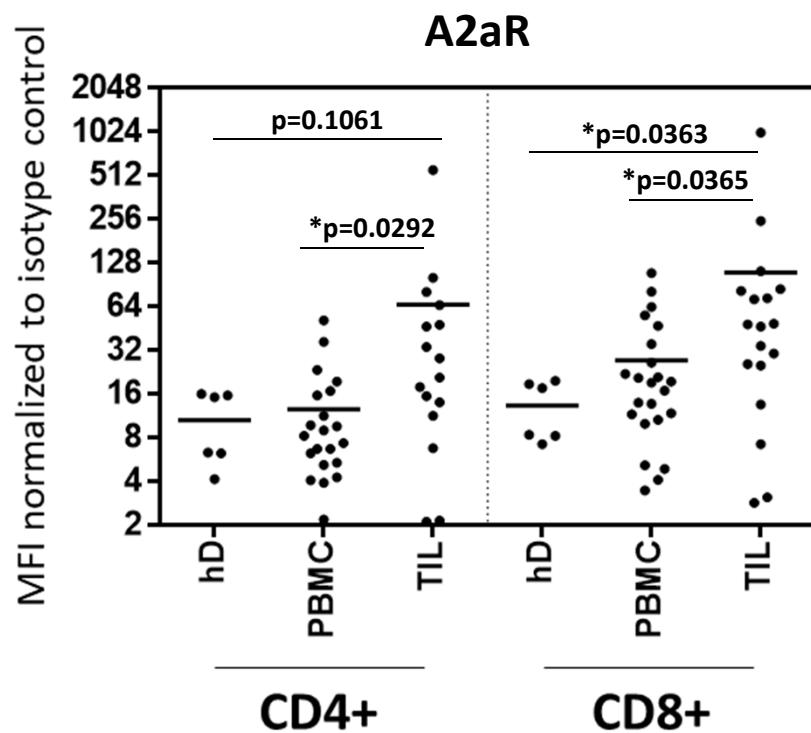

Supplementary Figure 2: Summarized Flow Cytometry Data from Glioma Patients of the Percentage of CD8+ (A) and CD4+ (B) T Cells Expressing a Given Immune Marker on the Basis of Grade and Whether the Analyzed Tumor Was Newly Diagnosed or Recurrent or Secondary.

Healthy donor (hD), peripheral blood mononuclear cells (PBMCs), tumor-infiltrating lymphocytes (TILs). Grade II are color coded to cobalt blue, grade III to turquoise, and grade IV to purple. Newly diagnosed cases are represented by an X, recurrent or secondary cases by a solid circle, and healthy donors by open squares.

A

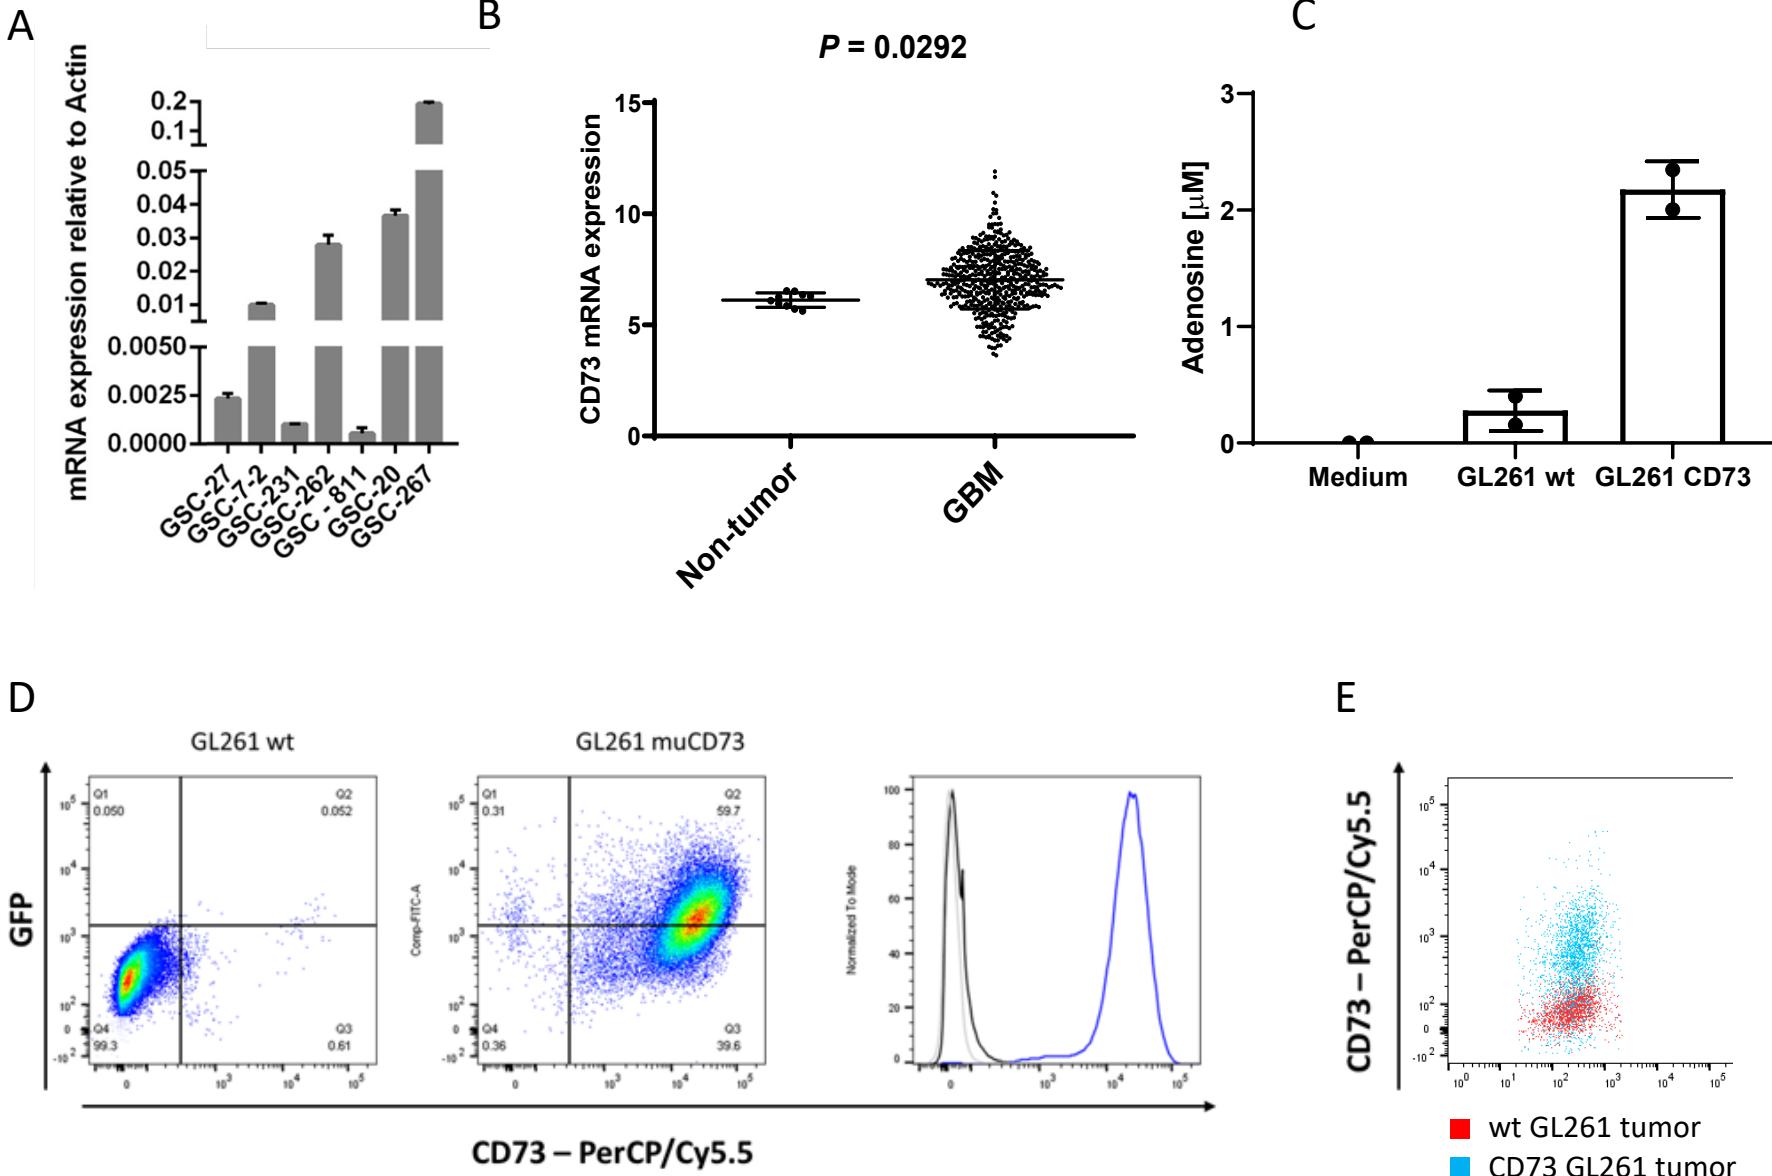

B

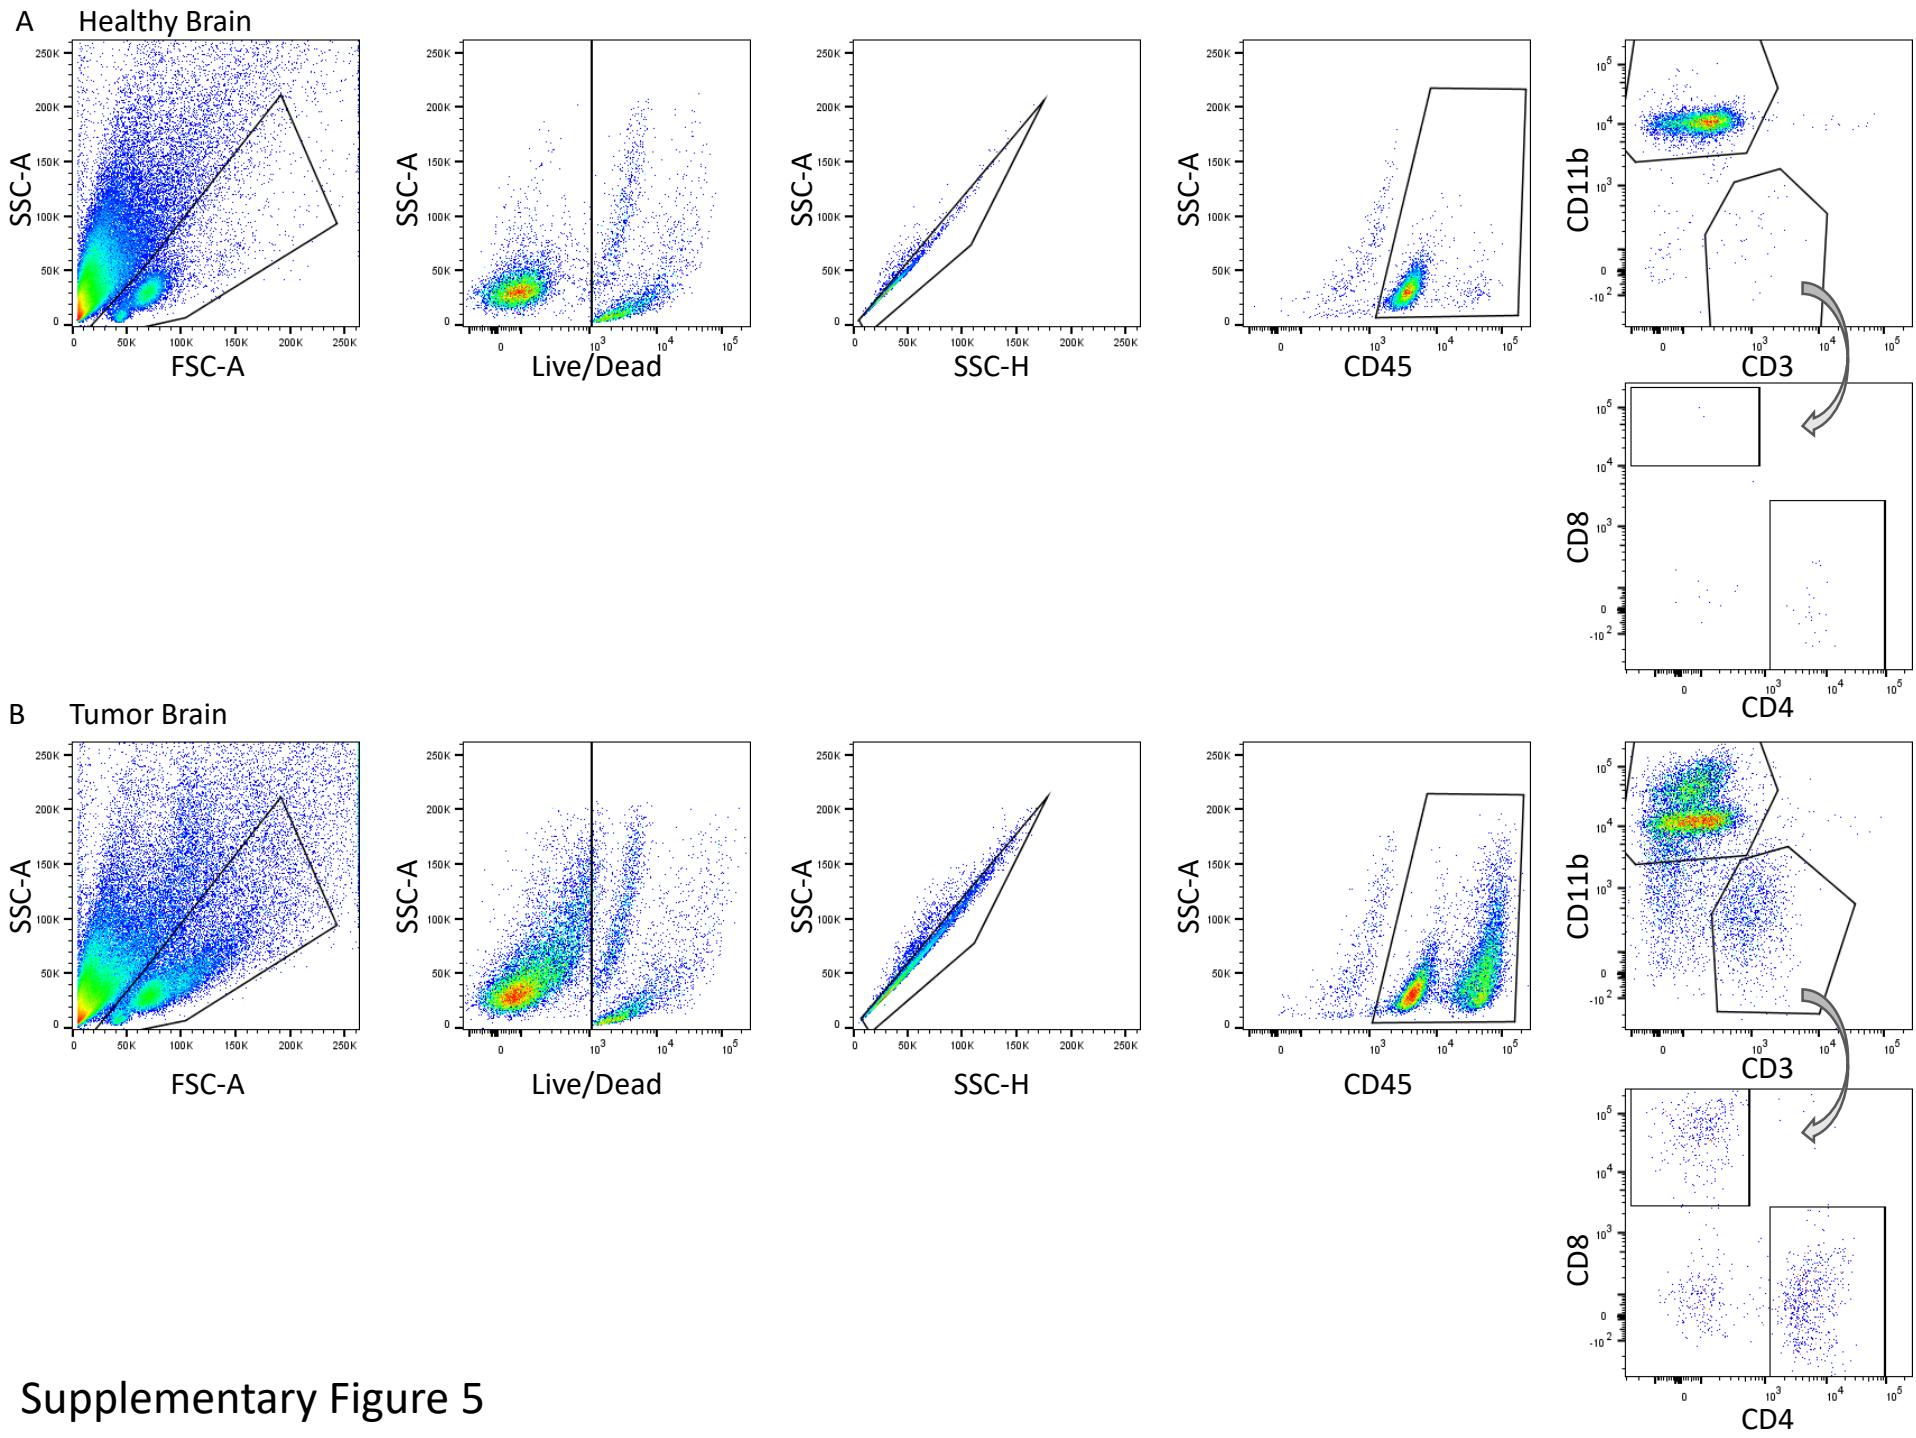

Supplementary Figure 3

Supplementary Figure 3: (A) Representative flow cytometry demonstrating the expression of A2aR in CD4+ and CD8+ tumor-infiltrating lymphocytes (TILs) and peripheral blood mononuclear cells (PBMCs). Isotype controls are shown for each population. (B) Summarized data of the mean fluorescent intensity (MFI) A2aR expression on CD4+ and CD8+ T cells from healthy donors (hD) and the PBMCs and TILs of glioma patients. CD4 patient PBMCs vs TILs, p = 0.0292; CD4 hD vs TILs, p = 0.1061; CD8 hD vs TILs, p = 0.0363; CD8 patient PBMCs vs TILs, p = 0.0365. Biomarker expression values were compared using a Mann-Whitney test.

Supplementary Figure 4

Supplementary Figure 4: (A) mRNA expression of CD73 relative to an actin control in glioma cancer stem cells (GSCs). (B) CD73 mRNA expression in non-tumor brain tissue and glioblastoma (GBM) from The Cancer Genome Atlas (TCGA) (the lines on the dot plot represent mean \pm SD). P values were calculated by using an unpaired T-test. (C, D) Murine GL261 glioma was transfected to express murine (mu) CD73. The functionality was confirmed with an adenosine assay kit (C) and expression was verified by flow cytometry (D) prior to intracranial implantation. (E) *Ex vivo* analysis of CD73 expression on GL261 wild-type (wt) and GL261 CD73 tumor cells isolated from tumor bearing mouse brains confirmed that CD73 expression was maintained on the tumor cells *in vivo*. Cells were additionally stained with a live/dead stain and a CD45 antibody to remove dead and immune cells. Paired t-test was performed to calculate P- value.

Supplementary Figure 5: Representative flow cytometry of immune cells isolated from the brains of healthy (A) and tumor-bearing mice (B). CD3+ T cells were almost absent (< 1% of CD45+ cells) in healthy brains; whereas in tumor-bearing mice, the CD3+ T cells population constituted to 10 to 15% of the CD45+ immune cell population.
