**Contents: Supplemental Figures = 7; Supplemental Tables = 4**

## **Supplemental Figures Titles and Legends**

**Supplemental Figure 1. Genetic and phenotypic profile of human supraclavicular primary pre-and differentiated adipocytes.** (A-C) Gene and protein expression of UCP1 in superficial neck (WAT) and supraclavicular (BAT) adipose tissue (n=1) (A); gene expression of brown/beige adipocyte markers (B) and adrenergic receptors (C) in WAT and BAT tissues. (D-F) Differentiation protocol and differentiation progression of primary human brown/beige adipocytes (D); gene expression of *PPARGC1A*, *UCP1* and *MT-CO2* (E) and protein expression of UCP1, TOM20 and Actin (F) over differentiation. (G-J) qPCR of late markers of differentiation (G); brown/beige adipocyte markers (H); fatty acid oxidation genes (I); and beta-adrenergic receptors (J) in pre- and mature primary supraclavicular adipocytes. Gene expression data are normalized to pre-adipocytes and expressed as mean  $\pm$  SEM on a Log 10 scale. Data are analyzed by 2-tailed unpaired Student's t-test and a One-way ANOVA with \*P<0.05, \*\*P<0.01, \*\*\*P<0.001, \*\*\*\*P<0.0001.

**Supplemental Figure 2. Silencing *ADRB3* in mature brown/beige adipocytes lowers UCP1 protein content but does not compromise lipid accumulation.** (A-C) Immunofluorescence of differentiated adipocytes staining for mitochondria (Mitotracker, red), lipid droplets (LipidTox-green), anti-UCP1 (white) and nuclei (Dapi, blu) in untreated siRNA (A); siRNA-Ctrl (B) and siRNA-*ADRB3* (C) adipocytes. Scale bars: 100  $\mu$ m for all images. (D) Quantification of LipidTox positive adipocytes in untreated, siRNA-Ctrl and siRNA-*ADRB3* adipocytes. Data are the mean of five sections analyzed by One-way ANOVA.

**Supplemental Figure 3. Silencing *ADRB3* in mature brown/beige adipocytes does not compromise beige/brown adipocyte identity and ETC genes and proteins.** (A) qRT-PCR analysis of human brown/beige adipocyte markers (B-C) mRNA expression of nuclear encoded electron transport chain genes (B) and proteins (C) in siRNA Ctrl and siRNA-*ADRB3* adipocytes. Gene expression data are normalized to siRNA-Ctrl adipocytes and expressed as mean  $\pm$  SEM on a Log 10 scale. Data are analyzed by 2-tailed unpaired Student's t-test with \*P<0.05, \*\*P<0.01, \*\*\*P<0.001, \*\*\*\*P<0.0001.

**Supplemental Figure 4. Activation of all three beta-adrenergic subtypes in primary human brown/beige adipocytes stimulates lipolysis and can be suppressed by**

**pre-treatment of the  $\beta_3$ -AR antagonist L-748,337.** (A) Basal, beta-agonists, and iso (10  $\mu$ M) stimulated lipolysis with and without pre-treatment of propranolol (10  $\mu$ M) and  $\beta_3$ -AR antagonist L-748,337 (10  $\mu$ M). Data are represented as mean  $\pm$  SEM. 2-way ANOVA was used for statistical analysis. \* when comparing basal to beta agonist stimulated lipolysis; # when comparing beta-agonist stimulation to propranolol; \$ when comparing beta-agonist stimulation to L-748,337 pre-treatment. \*P<0.05; \*\*P<0.01; \*\*\*P<0.001; \*\*\*\*P<0.0001.

**Supplemental Figure 5. Silencing *ADRB3* in mature brown/beige adipocytes lowers non-mitochondrial respiration.** (A-B) Non-mitochondrial respiration of differentiated siRNA-Ctrl and siRNA-*ADRB3* transfected adipocytes without ligand stimulated OCR (A) and Fsk-stimulated OCR (B). (C) mRNA expression of human genes encoding and glucose transporters 1 (*SLC2A1*) and 4 (*SLC2A4*) in transfected adipocytes. Gene expression data are normalized to siRNA-Ctrl adipocytes and expressed as mean  $\pm$  SEM on a Log 10 scale.

**Supplemental Figure 6. Phenotype of immortalized human brown/beige adipocytes.** (A) Representative microscopic pictures of the morphology of undifferentiated and differentiated immortalized brown adipocytes. (B) Oil Red O staining of differentiated adipocytes at passage number 18 (P18). (C-D) qPCR of late markers of differentiation (C); brown/beige adipocyte markers in pre- and mature adipocytes (D). (E) Protein expression of FABP4, adiponectin and UCP1 at P18 in pre- and mature adipocytes. (F-G) Gene expression of the mitochondrial encoded gene MT-CO2 (F); beta-adrenergic receptors (G) in undifferentiated and differentiated immortalized brown adipocytes. (H) Gene expression of beta-adrenergic receptors and UCP1 in pre-adipocytes and mature adipocytes of primary and immortalized brown/beige adipocytes. PCR data are normalized to pre-adipocytes and expressed as mean  $\pm$  SEM on a Log 10 scale, except for data in (H) that is not normalized. Data are analyzed by 2-tailed unpaired Student's t-test. \*P<0.05; \*\*P<0.01; \*\*\*P<0.001; \*\*\*\*P<0.0001.

**Supplemental Figure 7. Silencing *ADRB3* in immortalized human brown adipocytes lowers the cellular lipogenic and thermogenic machinery.** (A-G) mRNA expression profiles of beta-adrenergic receptor genes (A); thermogenic related genes (B); fatty acid synthesis genes (C); fatty acid oxidation genes (D); mtDNA encoded

genes (E); glucose transporters (F); and lipogenic genes (G) in 48h transfected siRNA-Ctrl and siRNA-*ADRB3* immortalized adipocytes. (H-I) Basal and Fsk (10  $\mu$ M) stimulated cAMP concentration (H) and western blot of PKA substrates in basal and Fsk 10  $\mu$ M stimulated transfected adipocytes (I). (J-K) Basal and Fsk (10  $\mu$ M) stimulated glycerol release (J) and protein expression of pHSL563; pHSL660; HSL; ATGL and actin in siRNA-Ctrl and siRNA-*ADRB3* adipocytes following treatment. (L-N) OCR by differentiated cells treated in immortalized siRNA-Ctrl (black); siRNA-*ADRB1* (gray) and siRNA-*ADRB3* (red) transfected adipocytes (L); quantification of basal respiration (M) and metabolic profile (N) by transfected immortalized adipocytes. Data are expressed as mean  $\pm$  SEM. Gene expression data are normalized to siRNA-Ctrl adipocytes, expressed on a Log 10 scale and analyzed by 2-tailed unpaired Student's t-test. OCR data are analyzed by one-way ANOVA. cAMP and lipolysis data are analyzed by 2-way ANOVA with \* when comparing basal vs stimulated in siRNA-Ctrl; \$ when comparing basal to stimulated in siRNA-*ADRB3* adipocytes; # when comparing same doses between siRNA-Ctrl and siRNA-*ADRB3* adipocytes. \*P<0.05; \*\*P<0.01; \*\*\*P<0.001; \*\*\*\*P<0.0001.

CT Values of Genes Extended Figure 4H (pre-mature adipocytes)					
	Gene	pre-adipocytes		mature adipocytes	
		average	st.dev	average	st.dev
Primary Adipocytes	<i>ADRB1</i>	36.4	± 0.4	29.2	± 0.6
	<i>ADRB2</i>	31.4	± 0.1	25.4	± 0.3
	<i>ADRB3</i>	38.9	± 0.5	35.4	± 0.5
	<i>UCP1</i>	41.0	± 0	16.9	± 0.3
Immortalized Adipocytes	Gene	pre-adipocytes		mature adipocytes	
	<i>ADRB1</i>	33.0	± 0.3	30.6	± 0.2
	<i>ADRB2</i>	25.0	± 0.1	28.4	± 0.1
	<i>ADRB3</i>	36.6	± 1.4	31.2	± 0.2
	<i>UCP1</i>	41.0	± 0	27.4	± 0.4

CT Values of Genes Extended Figure 5				
Gene	siRNA-Ctrl		siRNA-ADRB3	
	average	st.dev	average	st.dev
<i>TBP</i>	24.4	± 0.4	24.1	± 0.1
<i>ADRB1</i>	28.1	± 0.3	30.9	± 0.6
<i>ADRB2</i>	26.9	± 0.1	27.1	± 0.1
<i>ADRB3</i>	31.3	± 0.3	35.8	± 1.2
