## **TREND Statement Checklist**

Paper Section/ Topic	Item	Descriptor	Reported	
	No		$\checkmark$	Pg #
Title and Abst	ract			
Title and	1	Information on how unit were allocated to interventions		
Abstract		Structured abstract recommended		
		Information on target population or study sample	$\checkmark$	
Introduction				
Background	2	Scientific background and explanation of rationale		
C		Theories used in designing behavioral interventions		
Methods				
Participants	3	Eligibility criteria for participants, including criteria at different levels in	_ //	
r ul cloipanto	5	recruitment/sampling plan (e.g., cities, clinics, subjects)	$\checkmark$	
		<ul> <li>Method of recruitment (e.g., referral, self-selection), including the</li> </ul>	-	
		sampling method if a systematic sampling plan was implemented		
		Recruitment setting		
		Settings and locations where the data were collected	$\checkmark$	
Interventions	4	Details of the interventions intended for each study condition and how		
		and when they were actually administered, specifically including:		
		<ul> <li>Content: what was given?</li> </ul>		
		<ul> <li>Delivery method: how was the content given?</li> </ul>		
		<ul> <li>Unit of delivery: how were the subjects grouped during delivery?</li> </ul>		
		<ul> <li>Deliverer: who delivered the intervention?</li> </ul>		
		<ul> <li>Setting: where was the intervention delivered?</li> </ul>		
		• Exposure quantity and duration: how many sessions or episodes or		
		events were intended to be delivered? How long were they intended to last?		
		<ul> <li>Time span: how long was it intended to take to deliver the</li> </ul>		
		intervention to each unit?		
		<ul> <li>Activities to increase compliance or adherence (e.g., incentives)</li> </ul>		
Objectives	5	<ul> <li>Specific objectives and hypotheses</li> </ul>		
Outcomes	6	Clearly defined primary and secondary outcome measures	$\checkmark$	
		<ul> <li>Methods used to collect data and any methods used to enhance the</li> </ul>		
		quality of measurements	$\checkmark$	
		Information on validated instruments such as psychometric and biometric		
		properties		
Sample Size	7	• How sample size was determined and, when applicable, explanation of any		
		interim analyses and stopping rules		
Assignment Method	8	• Unit of assignment (the unit being assigned to study condition, e.g.,	$\checkmark$	
		individual, group, community)		
		Method used to assign units to study conditions, including details of any		
		restriction (e.g., blocking, stratification, minimization)		
		Inclusion of aspects employed to help minimize potential bias induced due		
		to non-randomization (e.g., matching)		

## **TREND Statement Checklist**

Blinding (masking)       9       • Whether or not participants, those administering the interventions, and those assessing the outcomes were blinded to study condition assignment; if so, statement regarding how the blinding was accomplished and how it was assessed.         Unit of Analysis       10       • Description of the smallest unit that is being analyzed to assess intervention effects (e.g., individual, group, or community)       •         Statistical Methods       11       • Statistical method used to account for this (e.g., adjusting the standard error estimates by the design effect or using multilevel analysis)       •         Statistical Methods       11       • Statistical methods used to compare study groups for primary methods outcome(s), including complex methods of correlated data       •         Statistical Methods       • Statistical methods used for additional analyses, such as a subgroup analyses and adjusted analysis       •         • Statistical software or programs used       •       •         Participant flow       12       • Flow of participants through each stage of the study: enrollment, assignment, allocation, and intervention exposure, follow-up, analysis (a diagram is strongly recommended)       •         • Allocation and intervention exposure: the number of participants assigned to each study condition and the number of participants assigned to each study condition and the number of participants assigned to each study condition and the number of participants assigned to each study condition       •         • Allocation and intervention exposure: the number of participants assign	
Unit of Analysis       10 <ul> <li>Description of the smallest unit that is being analyzed to assess intervention effects (e.g., individual, group, or community)</li> <li>If the unit of analysis differs from the unit of assignment, the analytical method used to account for this (e.g., adjusting the standard error estimates by the design effect or using multilevel analysis)</li> </ul> <li>Statistical Methods</li> <li>Statistical methods used to compare study groups for primary methods outcome(s), including complex methods of correlated data</li> <ul> <li>Statistical methods used for additional analyses, such as a subgroup analyses and adjusted analysis</li> <li>Methods for imputing missing data, if used</li> <li>Statistical software or programs used</li> </ul> <li>Participant flow</li> <li>12</li> <li>Flow of participants through each stage of the study: enrollment, assignment, allocation, and intervention exposure, follow-up, analysis (a diagram is strongly recommended)</li> <li>Enrollment: the numbers of participants screened for eligibility, found to be eligible or not eligible, declined to be enrolled, and enrolled in the study</li> <li>Alscation and intervention exposure: the number of participants assigned to a study condition</li> <li>Allocation and intervention exposure: the number of participants who received each intervention</li> <li>Follow-up: the number of participants sub ocompleted the follow-up, by study condition</li> <li>Analysis: the number of participants included in or excluded from the main analysis, by study condition</li> <li>Description of protocol deviations from study as planned, along with reasons</li> <li>Recruitment</li> <li>Dates defining the periods of recruitment and follow-up</li> <li>Bas</li>	
Unit of Analysis       10       • Description of the smallest unit that is being analyzed to assess intervention effects (e.g., individual, group, or community)         • If the unit of analysis differs from the unit of assignment, the analytical method used to account for this (e.g., adjusting the standard error estimates by the design effect or using multilevel analysis)         Statistical       11       • Statistical methods used to compare study groups for primary methods outcome(s), including complex methods of correlated data         Methods       11       • Statistical methods used for additional analyses, such as a subgroup analyses and adjusted analysis         • Methods for imputing missing data, if used       •         • Statistical software or programs used       •         Results       •         Participant flow       12       • Flow of participants through each stage of the study: enrollment, assignment, allocation, and intervention exposure, follow-up, analysis (a diagram is strongly recommended)       •         • Enrollment: the numbers of participants screened for eligibility, found to be eligible or not eligible, declined to be enrolled, and enrolled in the study       •         • Allocation and intervention exposure: the number of participants assigned to a study condition       •         • Allocation and intervention exposure: the number of participants assigned to a study condition       •         • Allocation and intervention exposure: the number of participants who received each intervention       •         •	
intervention effects (e.g., individual, group, or community)       intervention effects (e.g., individual, group, or community)         if the unit of analysis differs from the unit of assignment, the analytical method used to account for this (e.g., adjusting the standard error estimates by the design effect or using multilevel analysis)       if the unit of analysis differs from the unit of assignment, the analytical methods used to compare study groups for primary methods outcome(s), including complex methods of correlated data         Methods       Statistical methods used for additional analyses, such as a subgroup analyses and adjusted analysis         Methods for imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing m	
intervention effects (e.g., individual, group, or community)       intervention effects (e.g., individual, group, or community)         if the unit of analysis differs from the unit of assignment, the analytical method used to account for this (e.g., adjusting the standard error estimates by the design effect or using multilevel analysis)       if the unit of analysis differs from the unit of assignment, the analytical methods used to compare study groups for primary methods outcome(s), including complex methods of correlated data         Methods       Statistical methods used for additional analyses, such as a subgroup analyses and adjusted analysis         Methods for imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing missing data, if used       imputing missing data, if used         imputing m

disease prevention research	
Baseline comparisons of those lost to follow-up and those retained, overall	
and by study condition	
Comparison between study population at baseline and target population	
of interest	
Baseline 15 • Data on study group equivalence at baseline and statistical methods used	
equivalence to control for baseline differences	

## **TREND Statement Checklist**

Numbers	16	Number of participants (denominator) included in each analysis for each		
analyzed	10	study condition, particularly when the denominators change for different		
anaryzea		outcomes; statement of the results in absolute numbers when feasible		
		<ul> <li>Indication of whether the analysis strategy was "intention to treat" or, if</li> </ul>		
		not, description of how non-compliers were treated in the analyses		
Outcomes and	17			
Outcomes and estimation	17	• For each primary and secondary outcome, a summary of results for each estimation study condition, and the estimated effect size and a confidence	$\checkmark$	
		interval to indicate the precision		
		Inclusion of null and negative findings		
		Inclusion of results from testing pre-specified causal pathways through		
		which the intervention was intended to operate, if any		
Ancillary	18	• Summary of other analyses performed, including subgroup or restricted		
analyses		analyses, indicating which are pre-specified or exploratory	~	
Adverse events	19	Summary of all important adverse events or unintended effects in each		
		study condition (including summary measures, effect size estimates, and		
		confidence intervals)		
DISCUSSION				
Interpretation	20	Interpretation of the results, taking into account study hypotheses,		
	20	sources of potential bias, imprecision of measures, multiplicative analyses,		
		and other limitations or weaknesses of the study		
		<ul> <li>Discussion of results taking into account the mechanism by which the</li> </ul>		
		intervention was intended to work (causal pathways) or alternative		
		mechanisms or explanations		
		<ul> <li>Discussion of the success of and barriers to implementing the intervention,</li> </ul>		
		fidelity of implementation		
		<ul> <li>Discussion of research, programmatic, or policy implications</li> </ul>		
Generalizability	21	<ul> <li>Generalizability (external validity) of the trial findings, taking into account</li> </ul>		
		the study population, the characteristics of the intervention, length of		
		follow-up, incentives, compliance rates, specific sites/settings involved in		
		TOHOW-up, incentives, compliance rates, specific sites/settings involved in		
Overall	22	<ul> <li>General interpretation of the results in the context of current evidence</li> </ul>
