

Supplementary Information

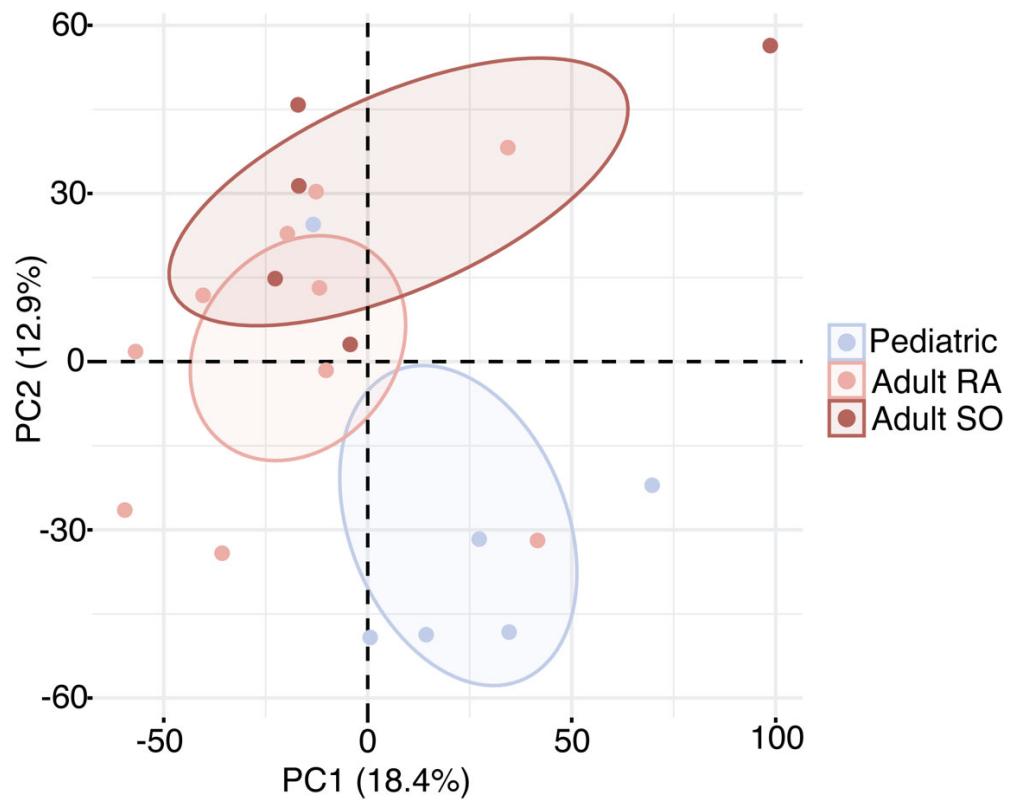

Figure S1: Adults not requiring oxygen are intermediate between children and adults who did. Principal component plot showing 95% confidence ellipses for pediatric samples, and samples from adults who did or did not require supplemental oxygen. RA = Room Air; SO = Supplemental Oxygen; N = 6 pediatric, 10 RA, 5 SO.

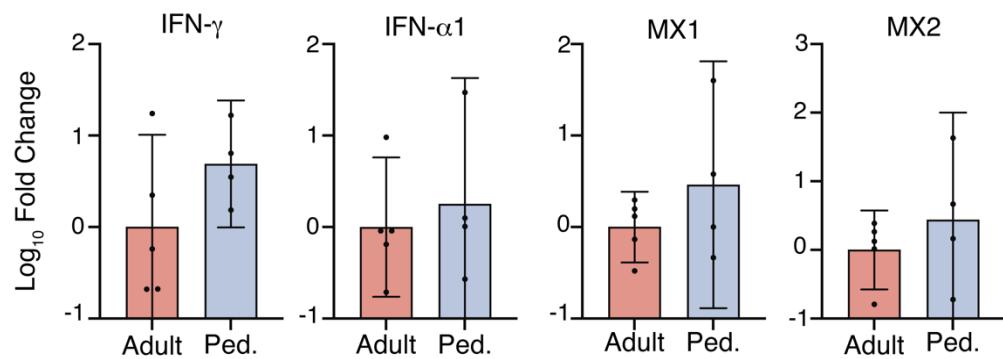

Figure S2: RT-qPCR of interferon-related genes. RT-qPCR was performed on indicated genes using 5 adult and 4 pediatric samples not included in the RNAseq analysis. Bars show mean \pm 95% CI. Ped. = Pediatric. Fold change was calculated by the $2^{\Delta\Delta Ct}$ method using the mean adult value as the reference.

Supplemental Table 1: 50 top contributing genes to Principal Component (PC) 1, PC2, and PC3 and their relative contributions.

PC1 (18.4%)		PC2 (12.9%)		PC3 (7.9%)
