

SUPPLEMENTAL FIGURES

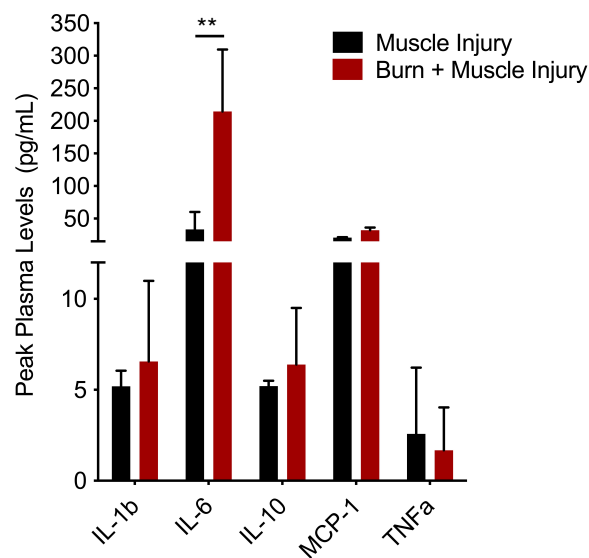

Figure S1: Of the cytokines measured, IL-6 exhibited the strongest response to a sterile, 30% TBSA burn injury with calf muscle injuries compared with muscle injuries alone.

Figure S2: Bioluminescent signal in mouse with burn and bilateral calf muscle injuries.

Figure S3: Enhancement or inhibition of plasmin did not significantly alter A) plasma IL-6 or B) NLR at 24h following the burn injury. (Kruskal-Wallis was performed)
