

Supplemental Figure 1: IPGTT and GSIS of male and female NOD, Δ Hel1, and KO mice.

Intraperitoneal glucose tolerance test of 12-week-old NOD, Δ Hel1, and KO female mice (A, B) and male (C, D) mice with area under the curve (AUC) analysis. Glucose-stimulated insulin secretion from isolated NOD, Δ Hel1, and KO islets (E) and insulin stimulation index normalized to total insulin content (F). Weight of 12-week-old NOD, Δ Hel1, and KO female (G) and male (H) mice. Analyzed by one-way ANOVA with multiple comparisons (G). *** $p < 0.001$. A, B, C, D: $n = 12-16$; A, B, C, D: $n = 16-25$, E, F: $n = 5-8$ and G, H $n = 13-15$.

Supplemental Figure 2: Flow cytometry analysis of pancreatic macrophages, CD4 and CD8 T cells at day 7 post-CVB3 infection.

Flow cytometry analysis of pancreatic immune cells for F4/80⁺ CD11b⁺ frequency (A) and cell counts (B); CD4⁺ T cell frequency (C) and cell counts (D); CD8⁺ T cell frequency (E) and cell counts (F) Analyzed by two-way ANOVA with Tukey's multiple comparisons (B). ** $p < 0.01$, *** $p < 0.001$. A-F: $n = 16-25$.

Supplemental Figure 3: Flow cytometry analysis of macrophage and T cell populations during spontaneous T1D.

Flow cytometry analysis of pancreatic IFN γ ⁺ CD4⁺ T cells (A); CD25⁺ Foxp3⁺ CD4⁺ T cells (B); and CD25⁺ Foxp3⁺ CD4⁺ T cells from the pancreatic lymph node (C); frequency and cell counts of 12-week-old NOD, Δ Hel1, and KO female mice. Analyzed by two-way ANOVA with Tukey's multiple comparisons (A), and analyzed by one-way ANOVA with Tukey's multiple comparisons (C). * $p < 0.05$. A, B, C: $n = 16-25$, D: $n = 9-11$, E: $n = 15-19$, and F: $n = 15$.

Supplemental Figure 4: KO mutation does not lead to the expression of truncated MDA5 protein.

Representative Western blot analysis of NOD, Δ Hel1, and KO bone marrow-derived macrophages (BMDMs) stimulated with LMW poly(I:C) for MDA5. MDA5 was measured using Fisher Scientific MDA5 Polyclonal Antibody CN: PIPA5-89344, and 40 μ g of total protein was used per sample. n=3

Supplemental Figure 5: Flow cytometry gating of innate immune cells.

Cells were pre-gated on single cells, live cells, and CD45⁺ cells for immunophenotyping of macrophages (CD11b, F480), PMN-MDSCs (CD11b, LY6G), and M-MDSCs (CD11b, LY6C). fluorescence minus one (FMO) is also shown for MHC-II, CD80, and CD86. Isotype is shown for intracellular cytokine staining for TNF.

Supplemental Figure 6: Flow cytometry gating strategy of T cells.

Cells were pre-gated on single cells, live cells, and CD45⁺ cells for immunophenotyping of CD4 T cells (CD4) and CD8 T cells (CD8). Fluorescence minus one (FMO) is also shown for CD69, CD25, PD-1. Isotype is shown for intracellular staining for FoxP3, IFN γ , and perforin.
