

## Supplemental Information

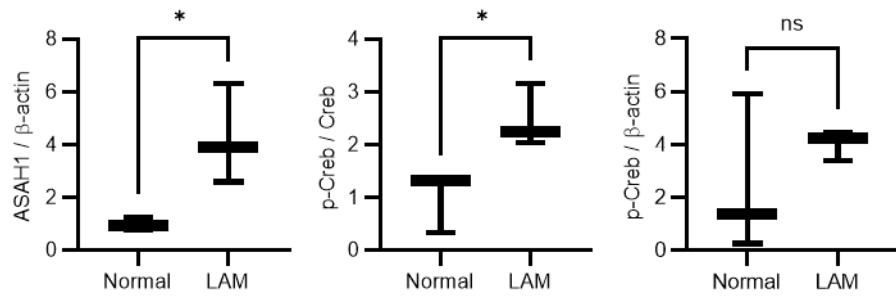

### Upregulation of acid ceramidase contributes to tumor progression in Tuberous Sclerosis

#### Complex

Aristotelis Astrinidis, Chenggang Li, Erik Y. Zhang, Xueheng Zhao, Shuyang Zhao, Minzhe Guo, Tasnim Olatoke, Ushodaya Mattam, Rong Huang, Alan G. Zhang, Lori Pitstick, Elizabeth J. Kopras, Nishant Gupta, Roman Jandarov, Eric P. Smith, Elizabeth Fugate, Diana Lindquist, Maciej M. Markiewski, Magdalena Karbowniczek, Kathryn A. Wikenheiser-Brokamp, Kenneth D. R. Setchell, Francis X. McCormack, Yan Xu, and Jane J. Yu

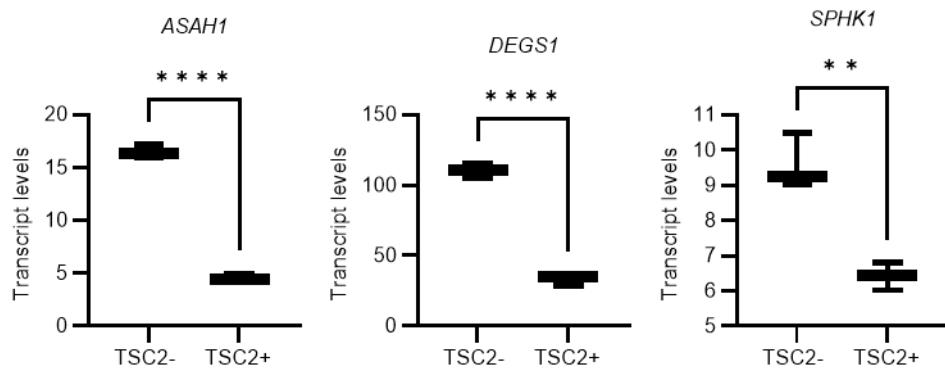

**Supplemental Figure S1.** Expression of *DEGS1* and *ASAHI* is evident in pulmonary LAM lesions. Box plots with 95% confidence intervals show *DEGS1* and *ASAHI* expression in female non-LAM lungs (n=15 subjects) and laser capture microdissected LAM lesion cells (n=14 subjects). \*\*\*\* P < 0.0001, Mann-Whitney test. (Corresponds to Fig. 2C).

**Supplemental Figure S2. Expression of ASAHI1 and transcription factor CREB in LAM lungs.**

Box plots with 95% confidence intervals show protein levels of ASAHI1 and phospho-CREB in LAM (n=3) and control lungs (n=3) quantified by densitometry of ASAHI1 and phospho-CREB. \* P < 0.05, unpaired t test. (Corresponds to Fig. 2F).

**Supplemental Figure S3. Expression of sphingolipid biosynthesis pathway genes in TSC2-null cells.** Box plots with 95% confidence intervals show mRNA levels of ASAHI, DEGS1, and SPHK1 in TSC2-null (TSC2-) 621-101 cells (n=3) and TSC2-addback (TSC2+) 621-103 cells (n=3). \*\* P < 0.01, \*\*\*\* P < 0.0001, unpaired t test. (Corresponds to Fig. 3B).

**Supplemental Table S1. Statistical analyses and P values in *in vitro* and *in vivo* experiments.**

Pairwise comparisons						
Figure panel	Plot	Comparison groups (A vs. B)	Unpaired t test P value	Mann-Whitney test P value	n (A)	n (B)
2C	ASA1H	Normal lung vs. LAM	<0.0001	<0.0001	15	14
	DEGS1	Normal lung vs. LAM	<0.0001	<0.0001	15	14
