

Figure S1. Candidate biomarker proteins that are not differentially secreted in response to *P. falciparum* and TNF- α . HBMEC were incubated for the indicated time points with media (black line), TNF- α (1 μ g/mL; gray line), RBCL (8×10^6 RBC/cm 2 ; pink line) or *P. falciparum*-iRBCL (8×10^6 iRBC/cm 2 ; purple line). Levels of candidate biomarker proteins were determined in the medium of duplicated culture wells by ELISA.
