

## Extended Data Figures

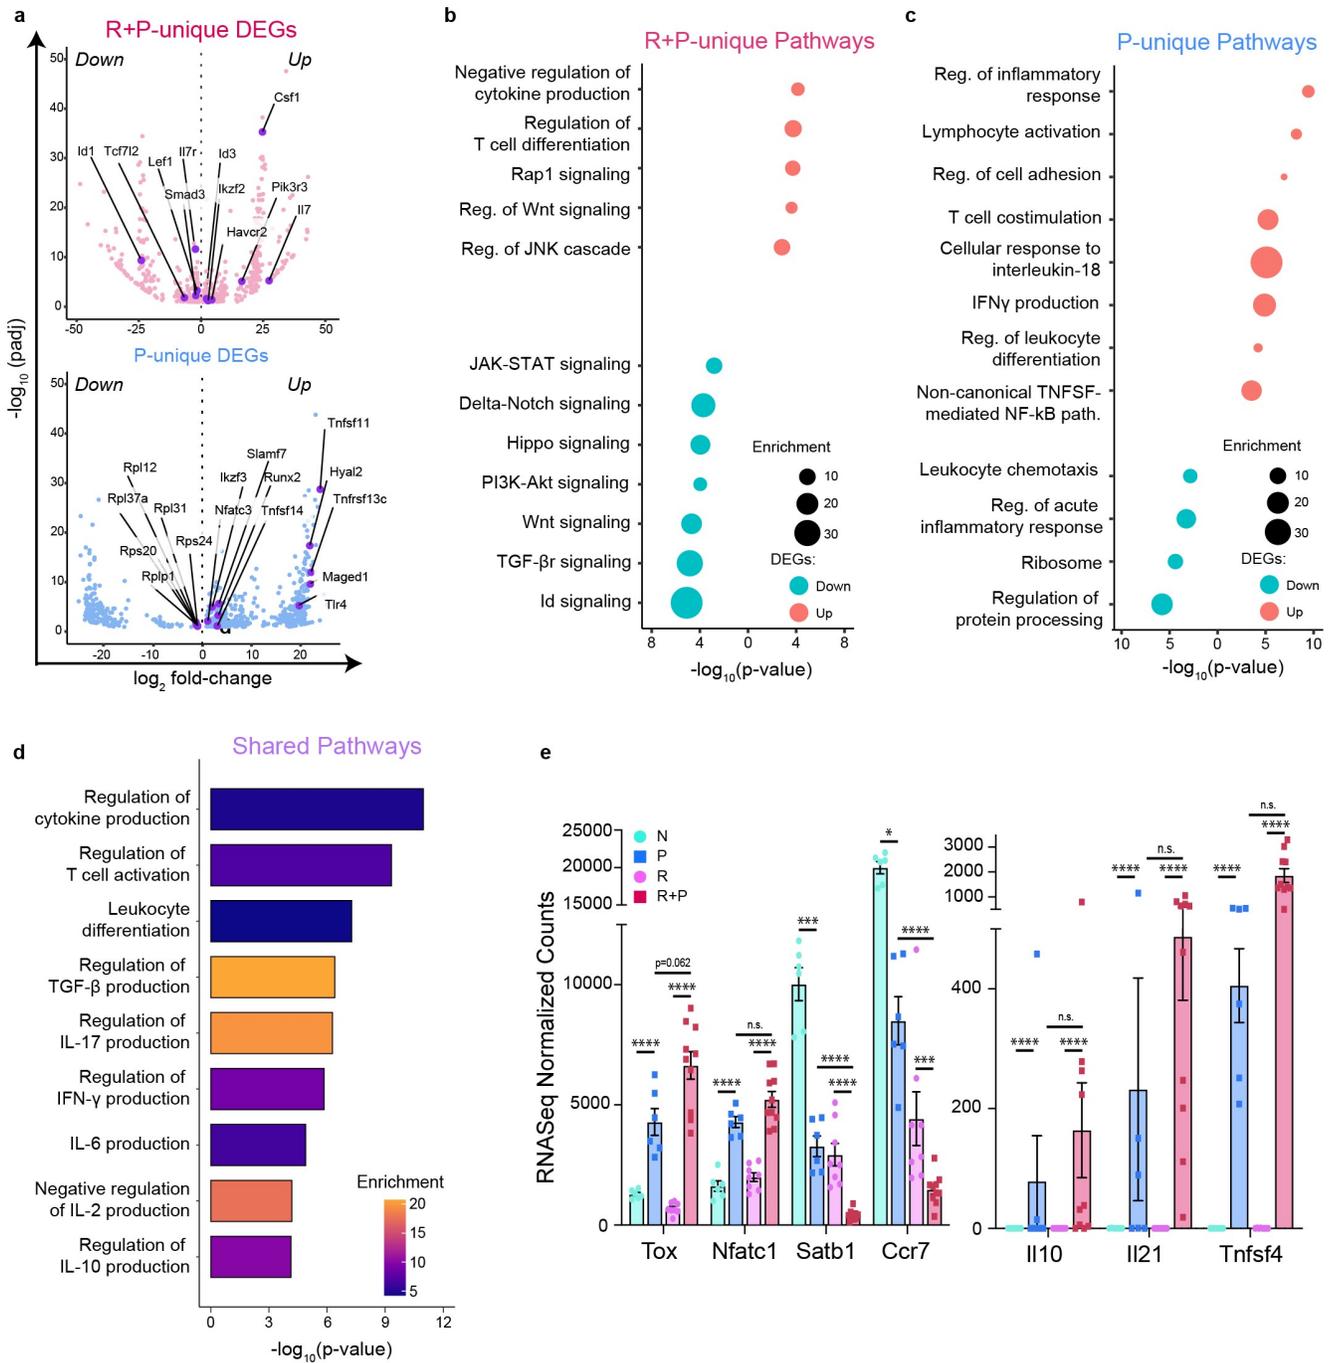

### Extended Data Figure 1: Memory and naive OVA-specific T<sub>FGS</sub> are phenotypically modified by

**pregnancy.** **a**, Gating strategy for the selection of OVA:K<sup>b</sup>-specific CD8<sup>+</sup> T cells (T<sub>FGS</sub>) via spectral flow cytometry. **b**, Bar graph showing percentages of T<sub>FGS</sub> cells from each experimental group (N: naive; R: D30 post-skin transplant; P or R+P: post-partum day 0-3) expressing phenotypic activation and coinhibitory markers. Data acquired from 2 or more biologically independent experiments, and each dot indicates individual mice;  $n = 10-33$  per group. Data represent mean  $\pm$  SEM. P values were determined by Kruskal-Wallis 1-way ANOVA test with Dunn's post hoc test. ns: not significant; \* $P < 0.05$ ; \*\* $P < 0.01$ ; \*\*\* $P < 0.001$ ; \*\*\*\* $P < 0.0001$ . **c**, Histograms showing phenotypic expression for FlowSOM clusters 1, 4, 5,

and 7. Cluster 1 is predominantly Naive  $T_{FGS}$ , cluster 4 is predominantly R  $T_{FGS}$ , cluster 5 is shared by P and R+P  $T_{FGS}$ , and cluster 7 is unique to R+P  $T_{FGS}$ .

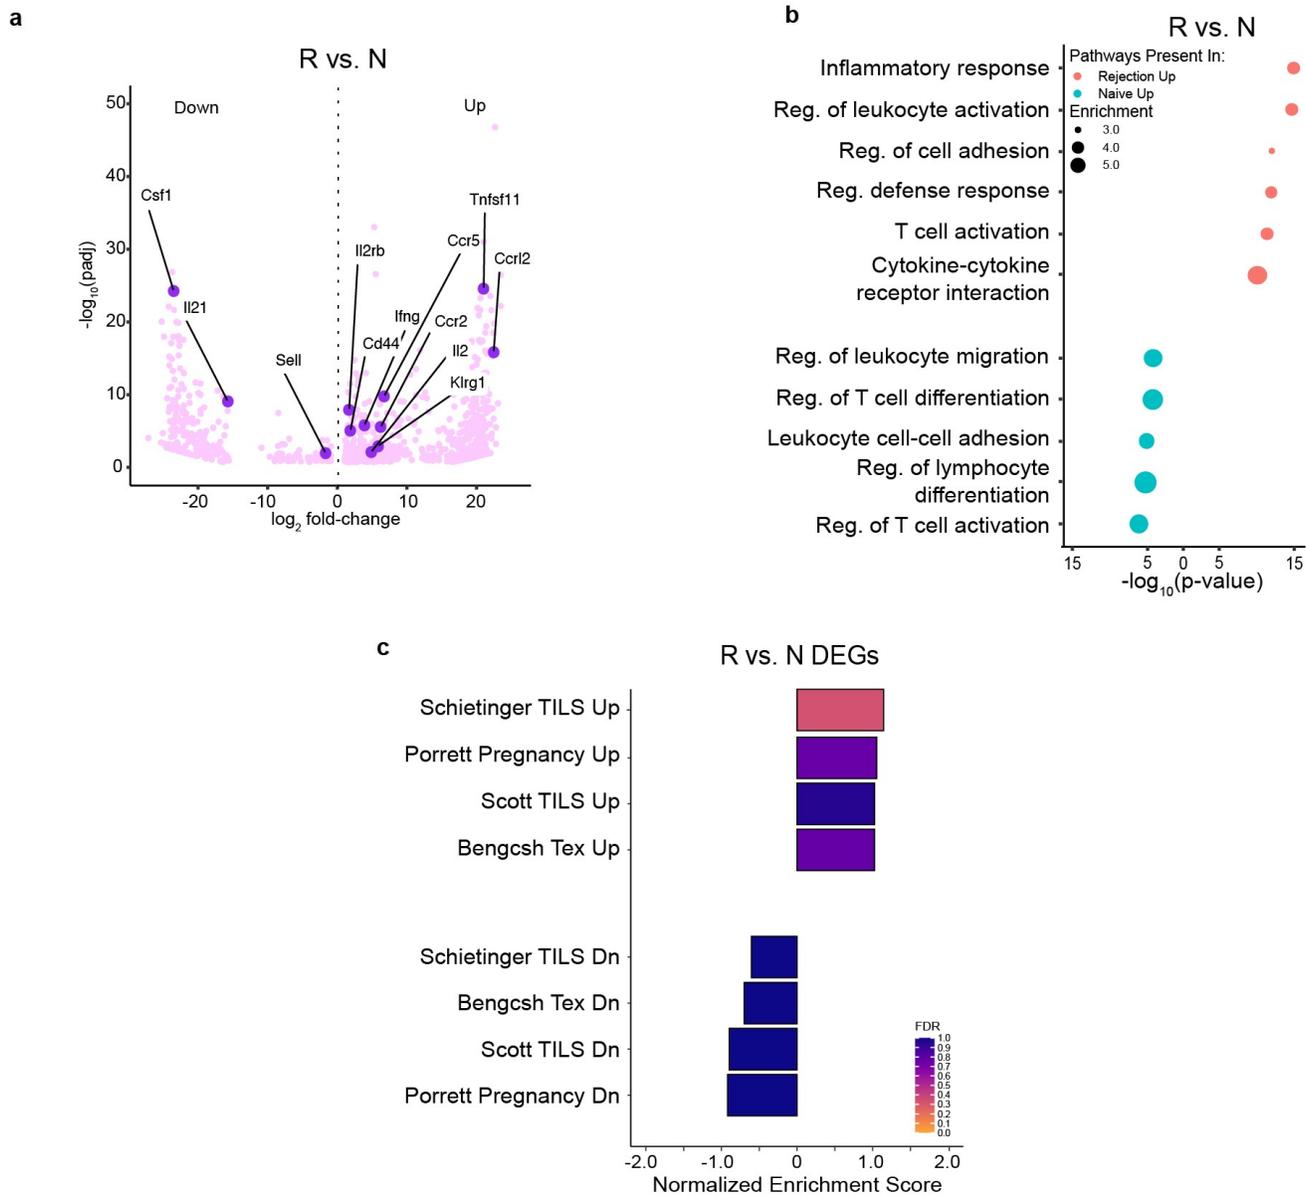

**Extended Data Figure 2: Analysis of DEGs** from box plots visualizing relative expression of DEGs in each K-Means cluster D from **Fig 3c**. **a**, Metascape pathway analysis of the 362 DEGs. **b-e**, Heatmap of representative genes in the indicated Metascape pathways. Each column indicates individual mice.

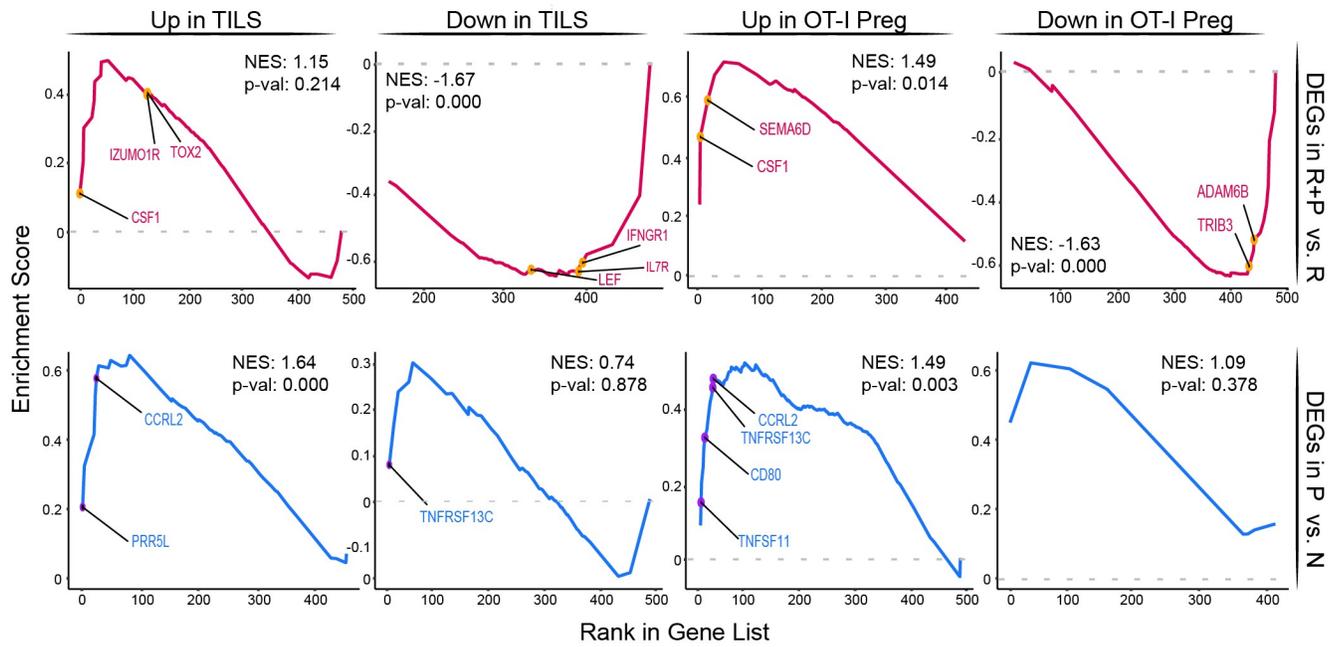

**Extended Data Figure 3: Comparison of transcriptional differences between OVA-specific T<sub>FGS</sub> subsets.** **a**, Volcano plot of DEGs induced in P vs N, and R+P vs R T<sub>FGS</sub>. **b-d**, Metascape pathway analysis for DEGs induced in R+P vs R (**b**), P vs N (**c**) and shared by R+P and P (**d**) T<sub>FGS</sub>. **e**, Normalized RNaseq counts as bar graphs for indicated DEGs. Each dot indicates individual mice. Data acquired from 2 or more biologically independent experiments and represent mean  $\pm$  SEM. P values were

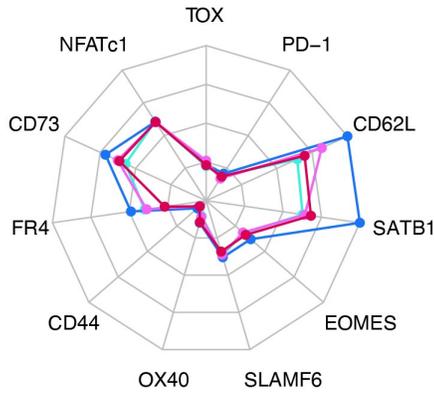

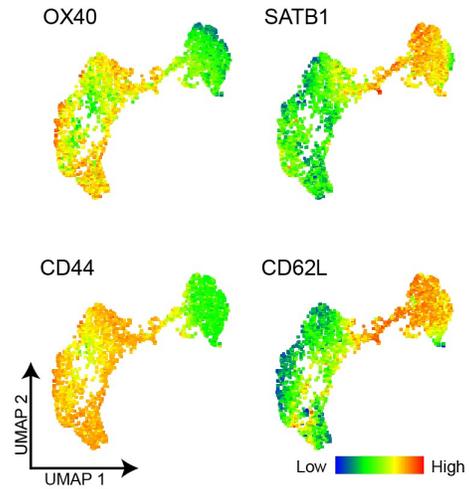

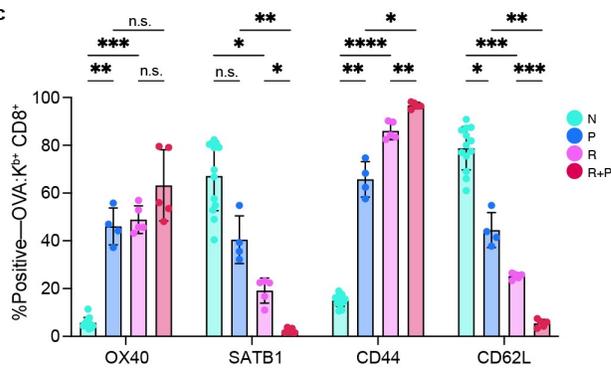

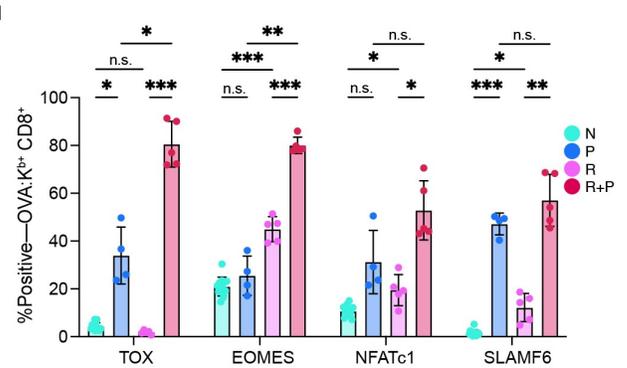

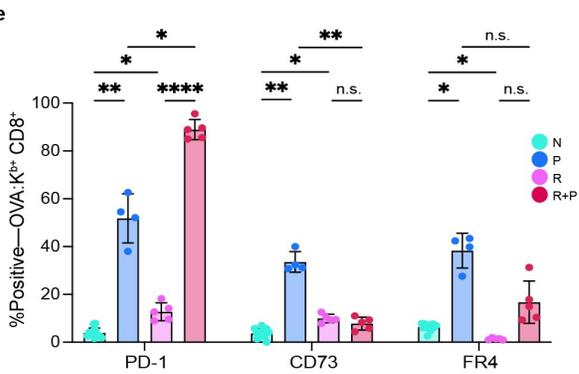

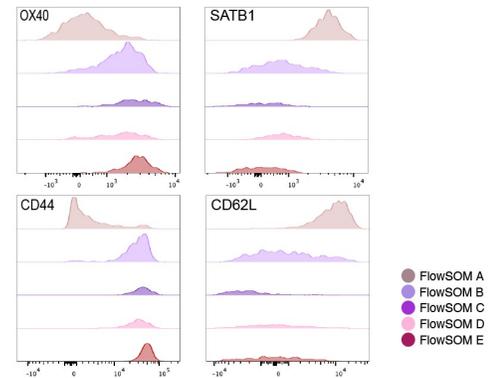

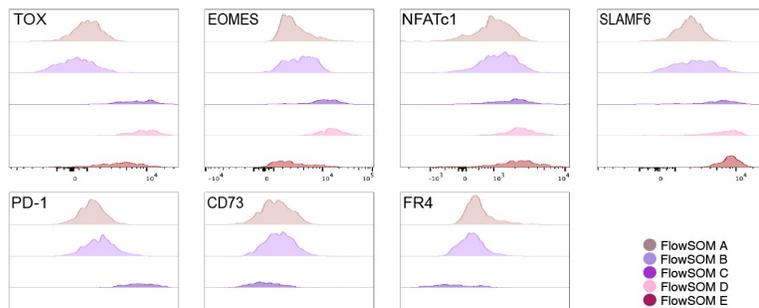

determined by Kruskal-Wallis 2-way ANOVA test with Dunn's post hoc test. ns: not significant; \* $P < 0.05$ ;  
\*\*\* $P < 0.001$ ; \*\*\*\* $P < 0.0001$ .

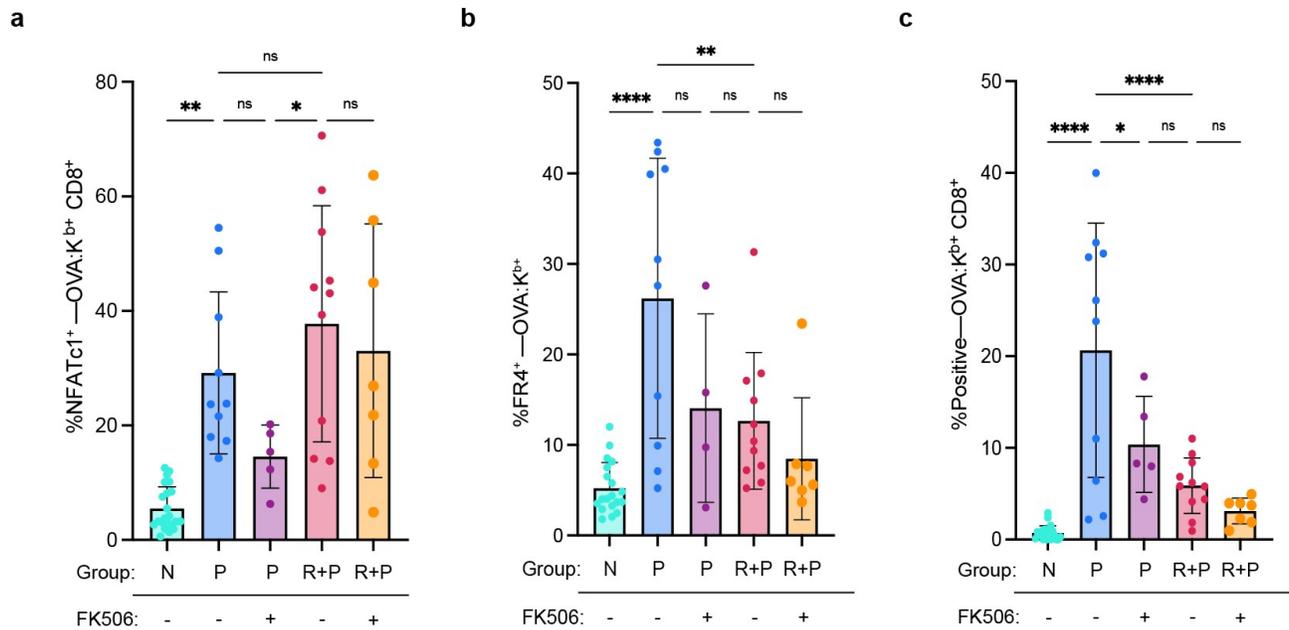

**Extended Data Figure 4: Transcriptional differences between OVA-specific T<sub>FGS</sub> from R vs N are not enriched for exhaustion. a-b**, Volcano plot and Metascape pathway analysis of DEGs induced in R vs N, T<sub>FGS</sub>. **c**, GSEA analysis comparing DEGs unique to R vs. N to published gene sets of exhaustion (6, 38-40).

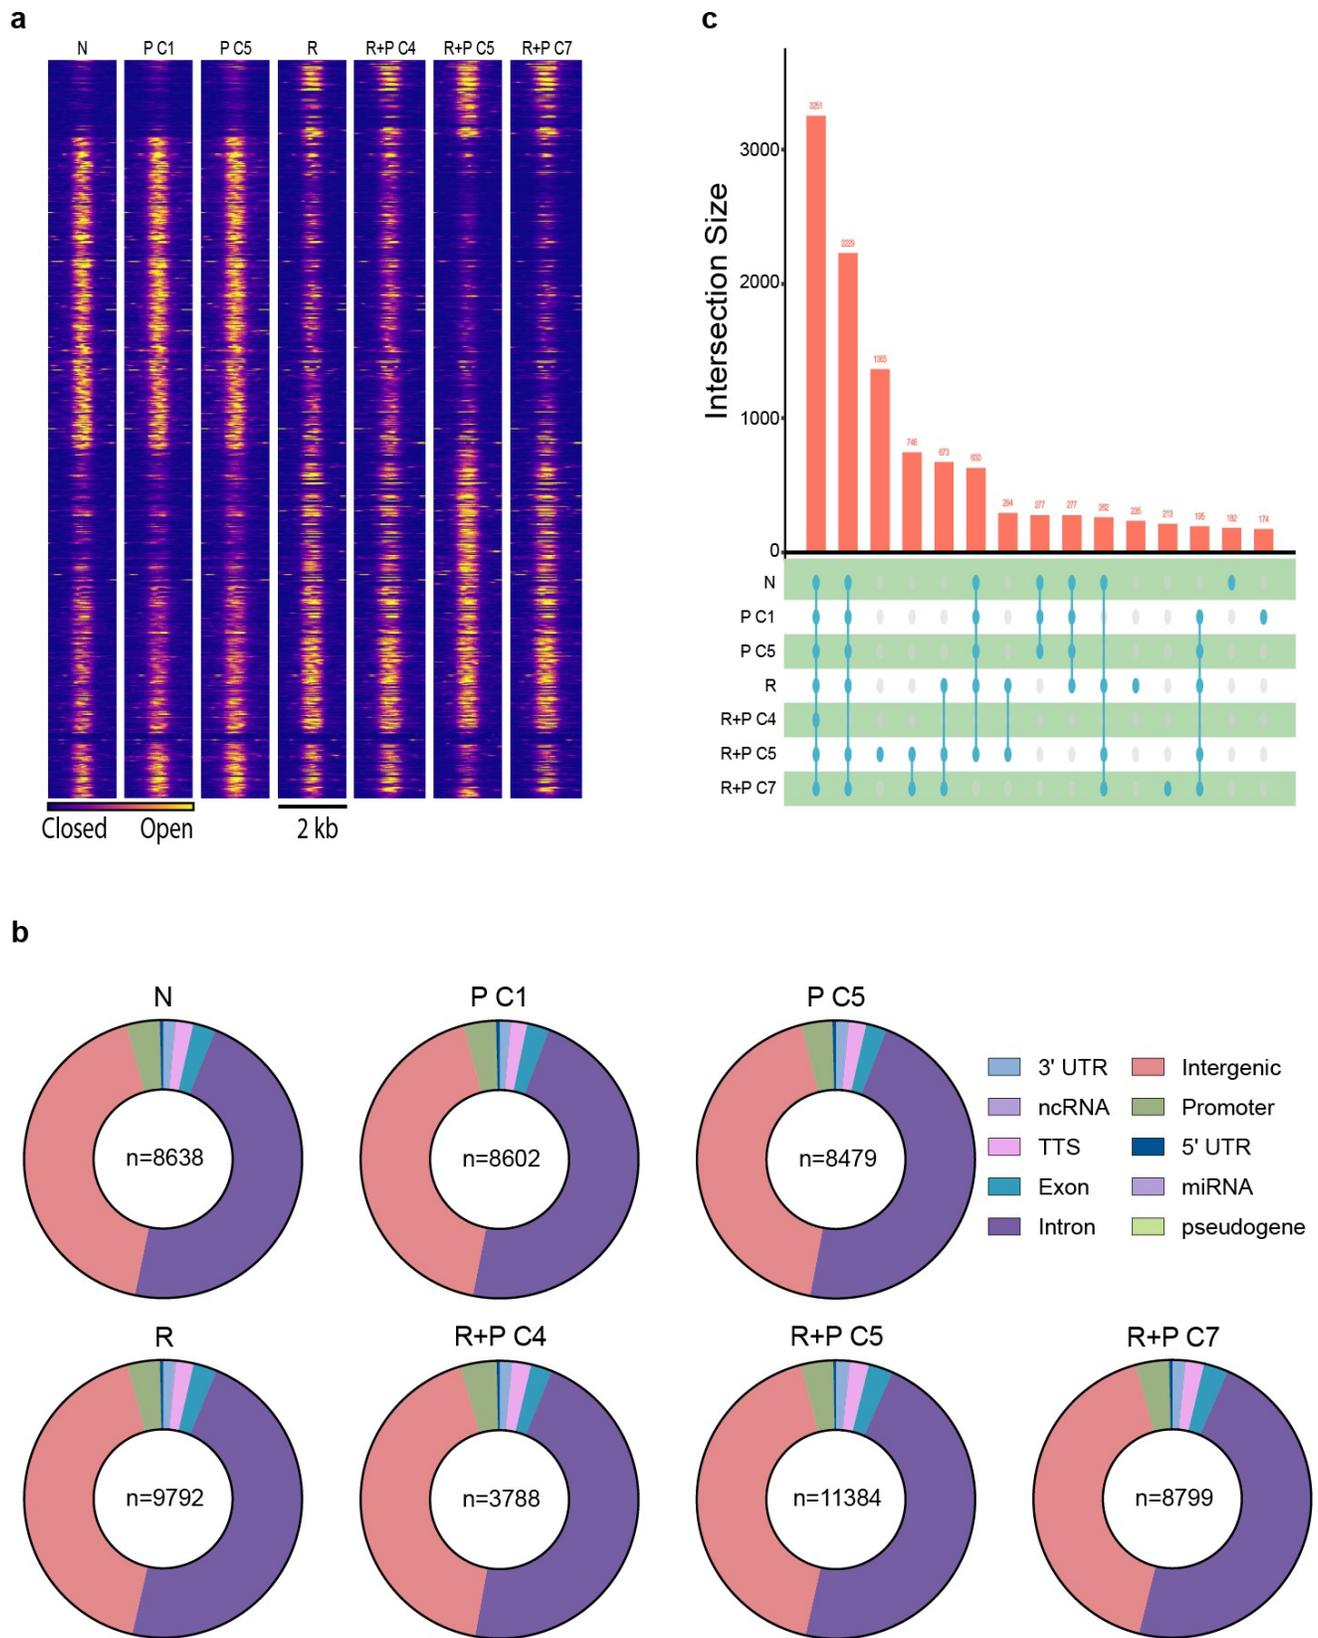

**Extended Data Figure 5: GSEA of transcriptional exhaustion by post-partum naïve and memory OVA-specific T<sub>FGS</sub>.** GSEA curves showing enrichment of exhaustion T cell signatures (either up or down regulated) during tumor responses (TILS) and pregnancy (6, 40) in R+P (top row) vs. R and P vs. N (bottom row) DEGs. NES, Normalized Enrichment Score.

**a****b****c****d****e****f****g**

**Extended Data Figure 6: New phenotypic panel enhances separation of post-partum memory vs. naive OVA-specific T<sub>FCS</sub>.** **a**, Radar plot showing phenotypic profile of non-OVA:K<sup>b</sup>-specific CD8<sup>+</sup> T cells from N, P, R and R+P mice. Data are represented as normalized MFI of the highest/lowest MFI for each marker for T<sub>FCS</sub> and non-T<sub>FCS</sub> from the 4 experimental groups. **b**, UMAP with heatmap overlays of additional phenotypic markers expressed by T<sub>FCS</sub> across experimental groups. **c-e**, Bar graphs showing percentages of T<sub>FCS</sub> cells expressing phenotypic markers of activation and exhaustion. Data acquired from 2 or more biologically independent experiments; *n* = 4-13 per group. Each dot indicates individual mice. Data represent mean ± SEM. P values were determined by Kruskal-Wallis 2-way ANOVA test with Dunn's post hoc test. ns: not significant; \*P<0.05; \*\*P<0.01; \*\*\*P<0.001; \*\*\*\*P<0.0001. **f-g**, Histograms showing phenotypic expression for FlowSOM clusters from Figure 6c. FlowSOM A is predominantly N T<sub>FCS</sub>, FlowSOM B is predominantly R T<sub>FCS</sub>, FlowSOM C+D are predominantly R+P T<sub>FCS</sub>, and FlowSOM E is unique to P T<sub>FCS</sub>.

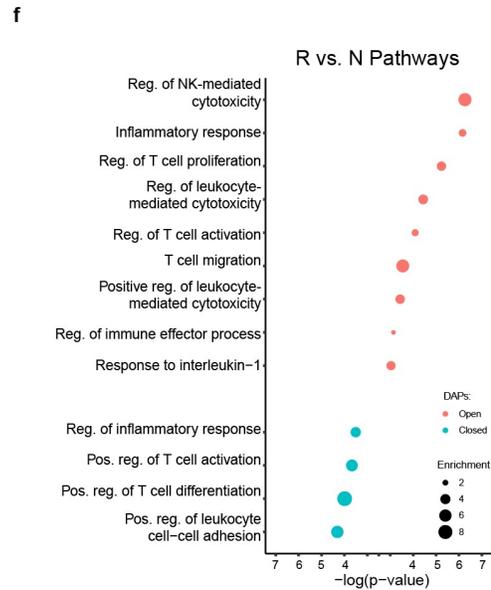

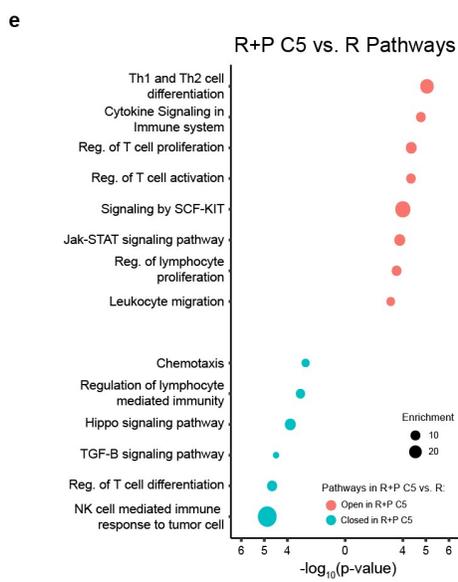

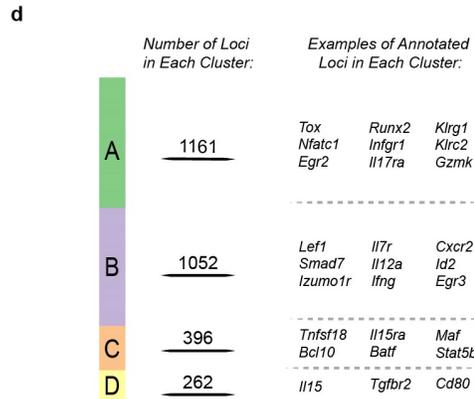

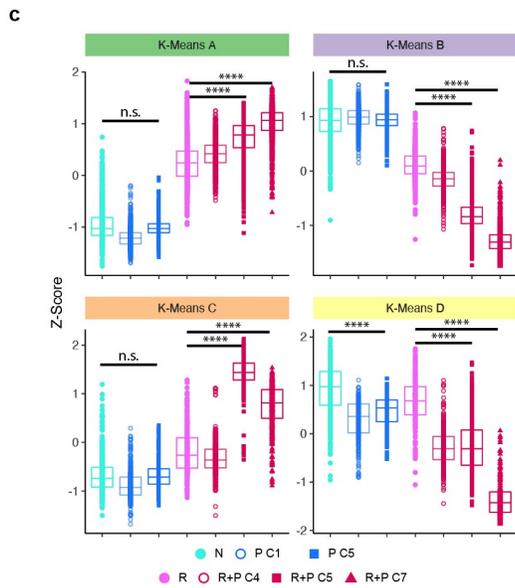

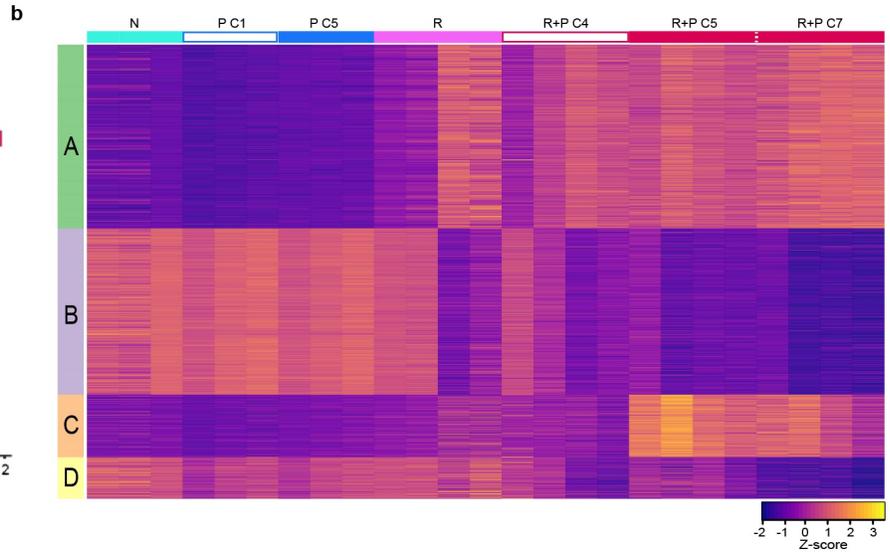

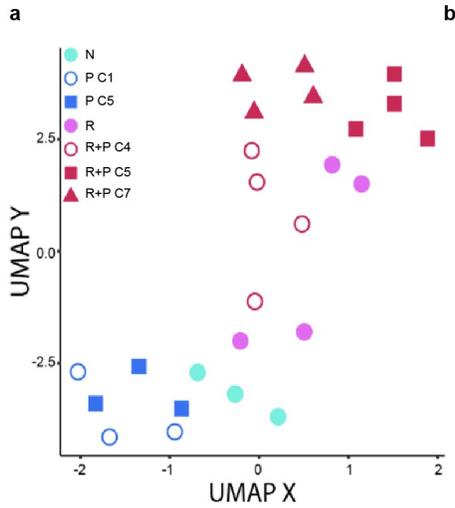

**Extended Data Figure 7: Pregnancy-induced phenotypic changes in OVA-specific R+P T<sub>FGS</sub> resist NFAT inhibition.** **a-c**, Bar graphs showing percentages of T<sub>FGS</sub> cells expressing additional phenotypic markers of activation and exhaustion from dams treated with FK506. Data acquired from 2 or more biologically independent experiments; *n* = 4-13 per group. Data represent mean ± SEM. P values were determined by 1-way ANOVA. Each dot indicates individual mice. ns: not significant; \*P<0.05; \*\*P<0.01; \*\*\*\*P<0.0001.

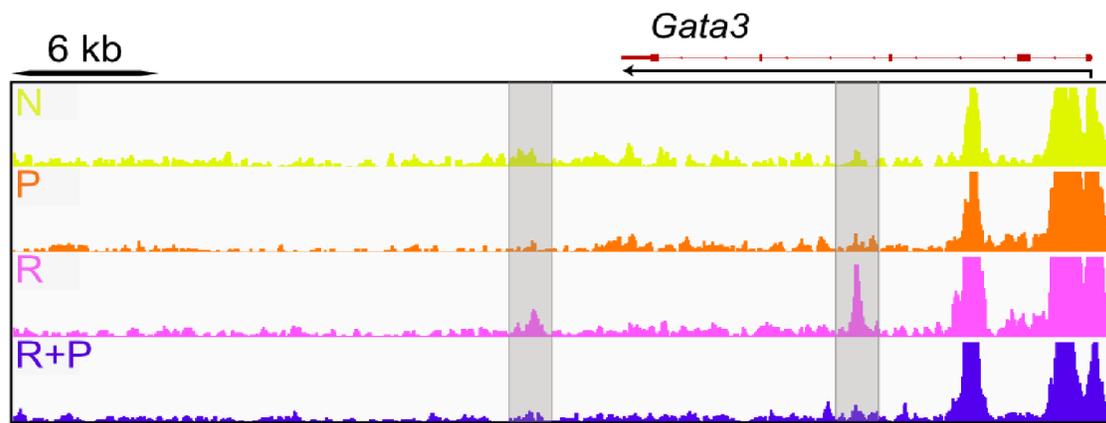

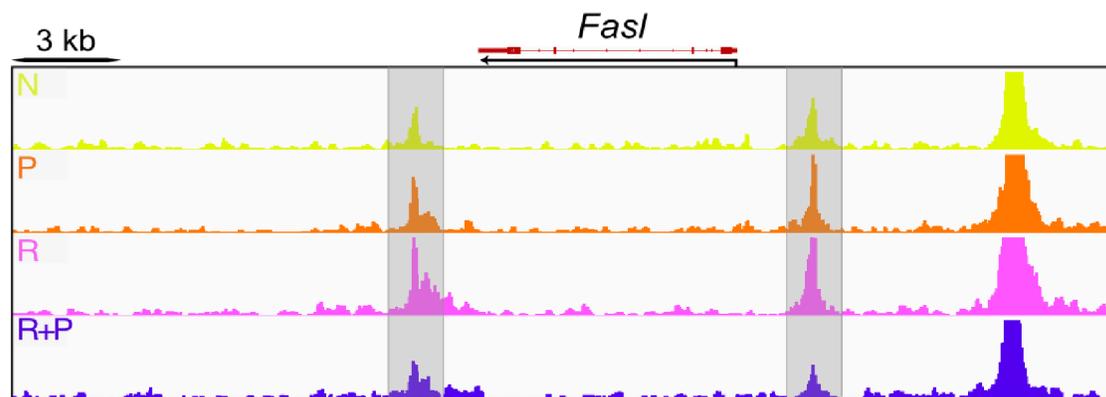

**Extended Data Figure 8: Peak distribution and visualization of ATAC-Seq dataset for 7 flowsorted OVA-specific T<sub>FGS</sub> from N, P, R and R+P groups. a, Chromatin accessibility heatmaps to further**

visualize global differences between  $T_{\text{FGS}}$  subsets. **b**, Pie charts showing the genomic distribution of reproducible ATAC-Seq peaks identified for each  $T_{\text{FGS}}$  subset. **c**, Upset plot showing the total number of reproducible peaks shared by various combinations of  $T_{\text{FGS}}$  subsets. This graph serves the same purpose as a Venn diagram but maintains visual proportionality even when comparing across multiple groups.

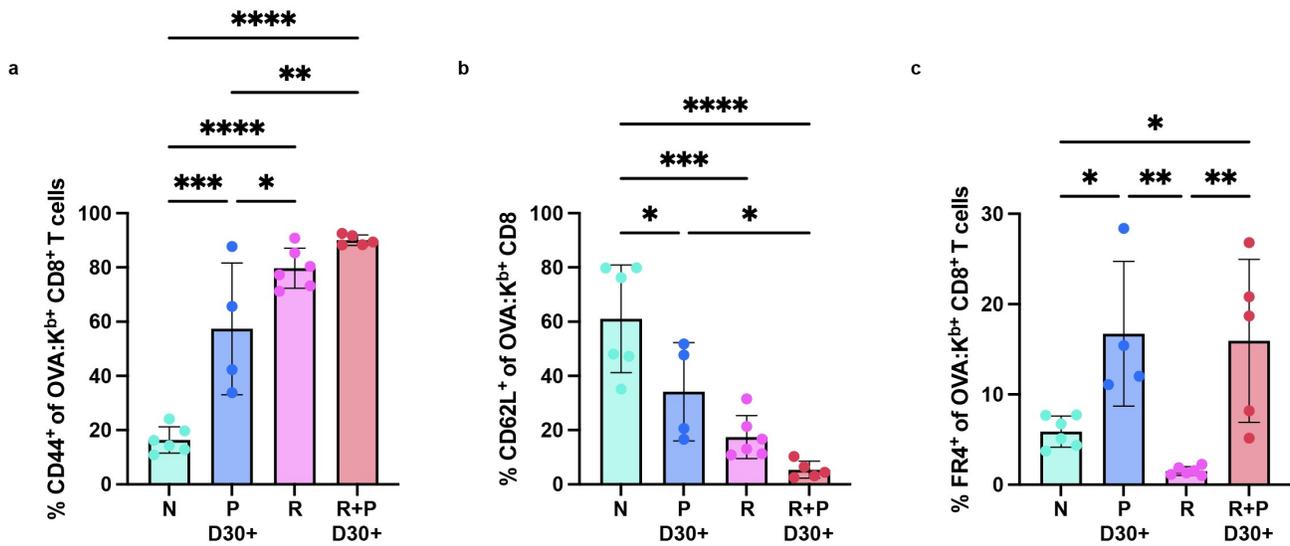

**Extended Data Figure 9: Comparison of pregnancy-induced chromatin remodeling in memory vs. naive OVA-specific T<sub>FGS</sub>.** **a-b**, UMAP and row-normalized ATAC-seq accessibility heatmap of the top differentially accessible peaks across all T<sub>FGS</sub> subsets (from **Fig 2a**), organized by K-means clustering (colored bar on left indicate 4 clusters A-D). **c**, Box plots visualizing chromatin accessibility at DEGs unique to each K-Means cluster identified. Data acquired from 2 or more biologically independent experiments. Each dot (**a,c**) or column (**b**) indicates individual mice. P values were determined by Welch's 2-tailed t-test. ns: not significant; \*\*\*\*P<0.0001. **d**, Number of loci and examples of annotated loci for each K-Means cluster A-D. **e-f**, Metascape pathway/gene ontology analysis for differentially accessible peaks in R+P vs. R T<sub>FGS</sub> (**e**), and R vs. N T<sub>FGS</sub> (**f**).

**a****b**

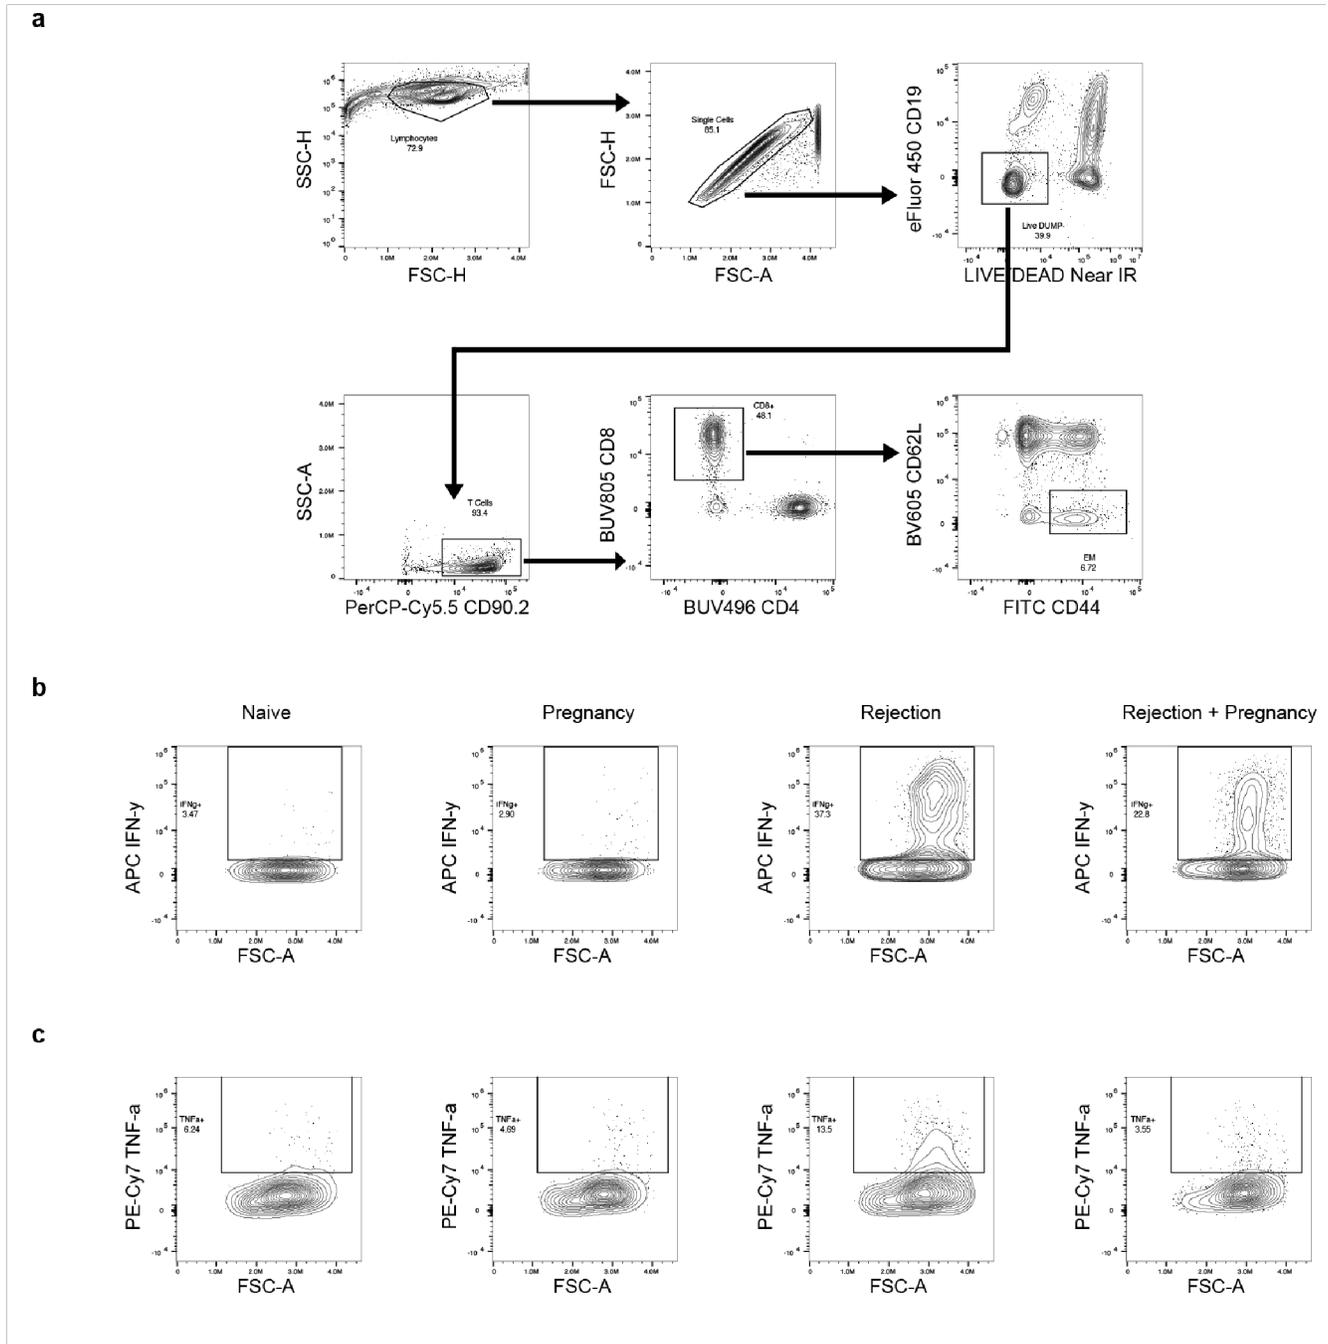

**Extended Data Figure 10:** ATAC-Seq tracks at the (a) *Gata3* and (b) *Fasl* loci. Peaks uniquely induced in R T<sub>FCS</sub> are highlighted in gray.

**Extended Data Figure 11: HOMER de-novo analysis of nucleotide motifs associated with transcription factor binding in post-partum memory OVA-specific T<sub>FGS</sub>.** Transcription factor binding motifs that were significantly enriched in reproducible ATAC peaks opening (a) or closing (b) in R+P vs. R T<sub>FGS</sub>. P values were determined by Homer de novo motif analysis.

**Extended Data Figure 12: Pregnancy induces persistent exhausted phenotype in post-partum memory OVA-specific T<sub>REG</sub>s.** **a-c**, Bar graphs showing percentage of OVA-specific T<sub>REG</sub>s from P and R+P (both at post-partum day 30), Naive (N) or R (day 30-60 post-skin transplant) expressing additional phenotypic markers. Data acquired from 2 or more biologically independent experiments; n=4-6 per group. Each dot indicates individual mice, and data represent mean ± SEM. P values determined by one-way ANOVA. ns: not significant; \*P<0.05; \*\*P<0.01; \*\*\*\*P<0.0001.

**Extended Data Figure 13: Pregnancy reduces effector capacity of post-partum memory and naive OVA-specific T<sub>FGS</sub>.** **a**, Gating strategy for the selection of bulk CD62L<sup>low</sup>CD44<sup>+</sup> CD8<sup>+</sup> T cells for analysis of intracellular IFN-γ<sup>+</sup> and TNF-α<sup>+</sup> by spectral flow cytometry. **b-c**, Representative plots of IFNγ<sup>+</sup> (**b**) and TNF-α<sup>+</sup> (**c**) T cells stimulated with 2W-OVA.F1 T cell-depleted splenocytes, for each experimental group (N, R, as well as P and R+P at post-partum day 0-3).

**Extended Data Figure 14: Pregnancy adaptively utilizes multiple distinct mechanisms to induce hypofunction in memory vs naive T<sub>FGS</sub>.** Graphical abstract. Pregnancy induces hypofunction in memory R+P T<sub>FGS</sub> that is associated with phenotypic and transcriptional exhaustion, partial reversal of the memory transcriptome, chromatin remodeling of exhaustion loci, and restored susceptibility to costimulation blockade-mediated acceptance of fetus-matched heart grafts.
