

# Supplemental Figure 1

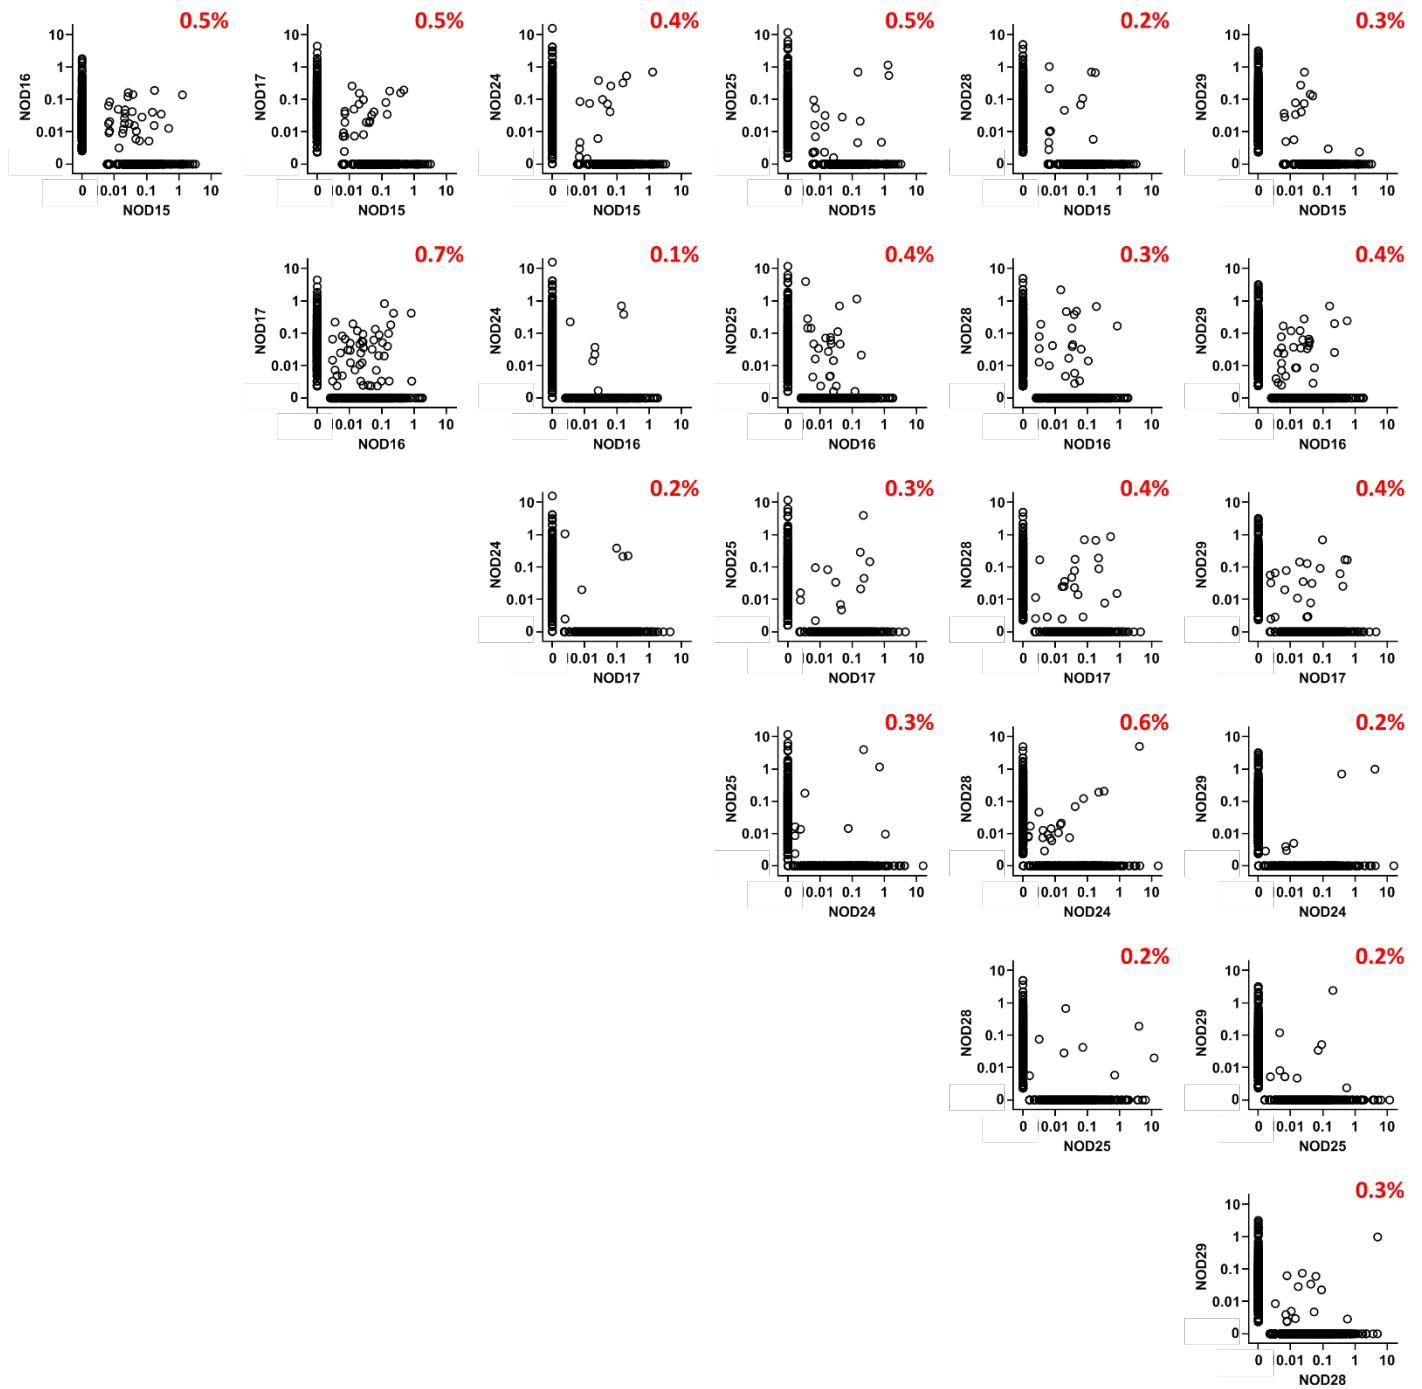

**Supplemental Figure 1: Accumulative frequency of unique TCR clonotypes.** Each graph depicts TCR alpha or beta repertoires in the islets of individual NOD mice studied. Individual unique TCR clonotypes are aligned in X-axis (highest to lowest clonotypes), and the accumulative frequencies of all clonotypes that are more frequent than any given clonotypes are plotted in Y-axis. Sharp slopes in the first few percent of unique clonotypes demonstrate the deflect prevalence of those clonotypes.

# Supplemental Figure 2

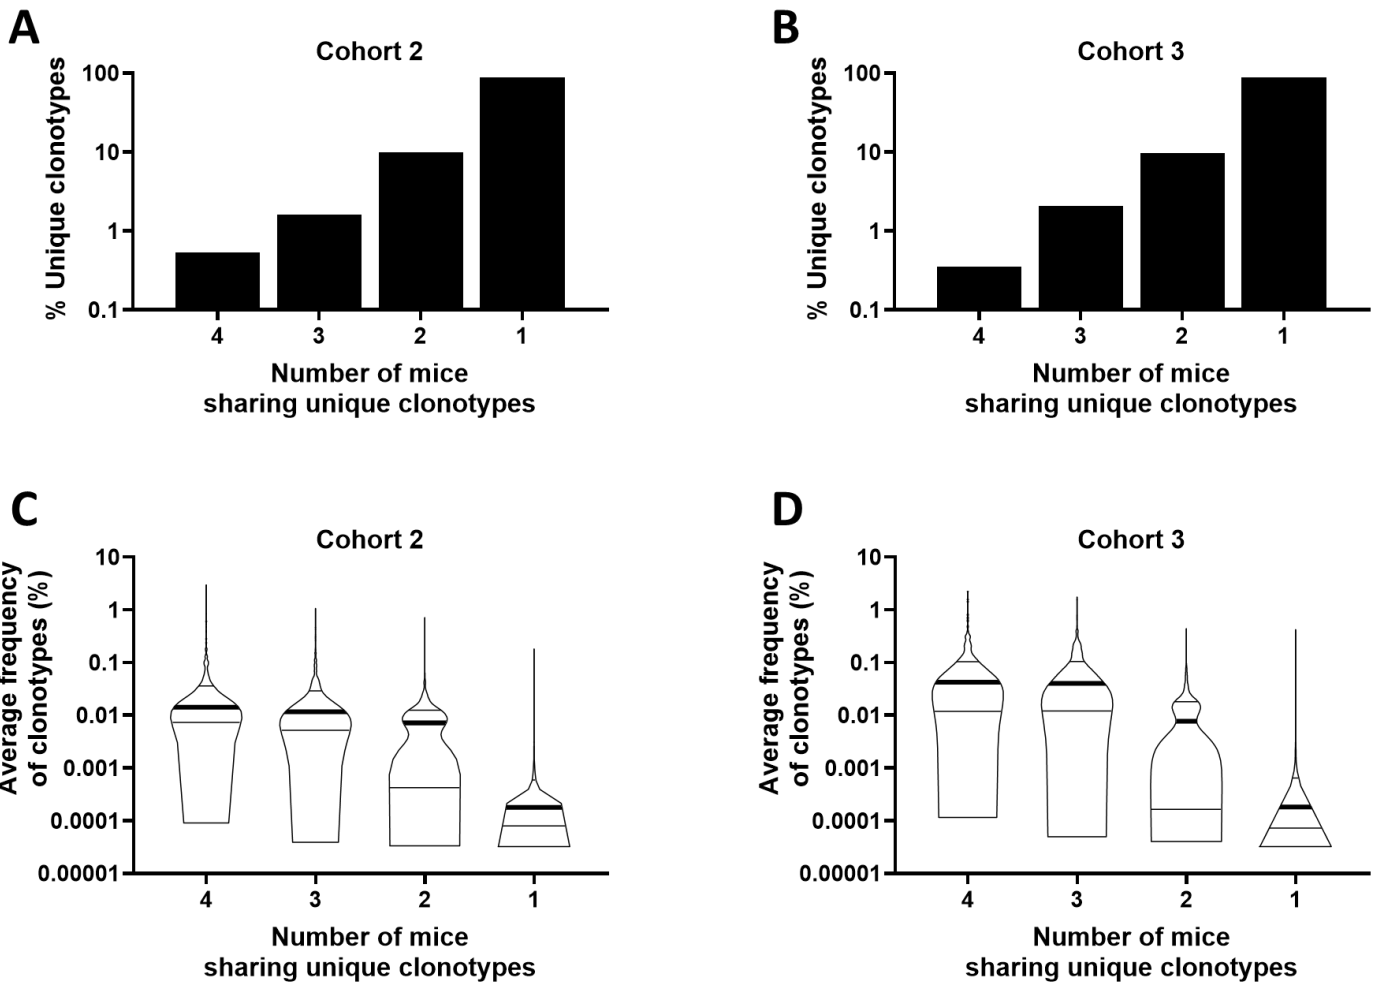

**Supplemental Figure 2: Comparison of TCR alpha clonotype frequencies in the islets.** Each graph depicts TCR alpha repertoires in the islets of any two given NOD mice studied of the 21 possible pairings. Symbols represent frequency of each unique clonotype of one mouse in X-axis and that of the other mouse in Y-axis. Percentages of clonotypes that were detected in the islets of both mice are shown in red at the right-top corner of each graph.

# Supplemental Figure 3

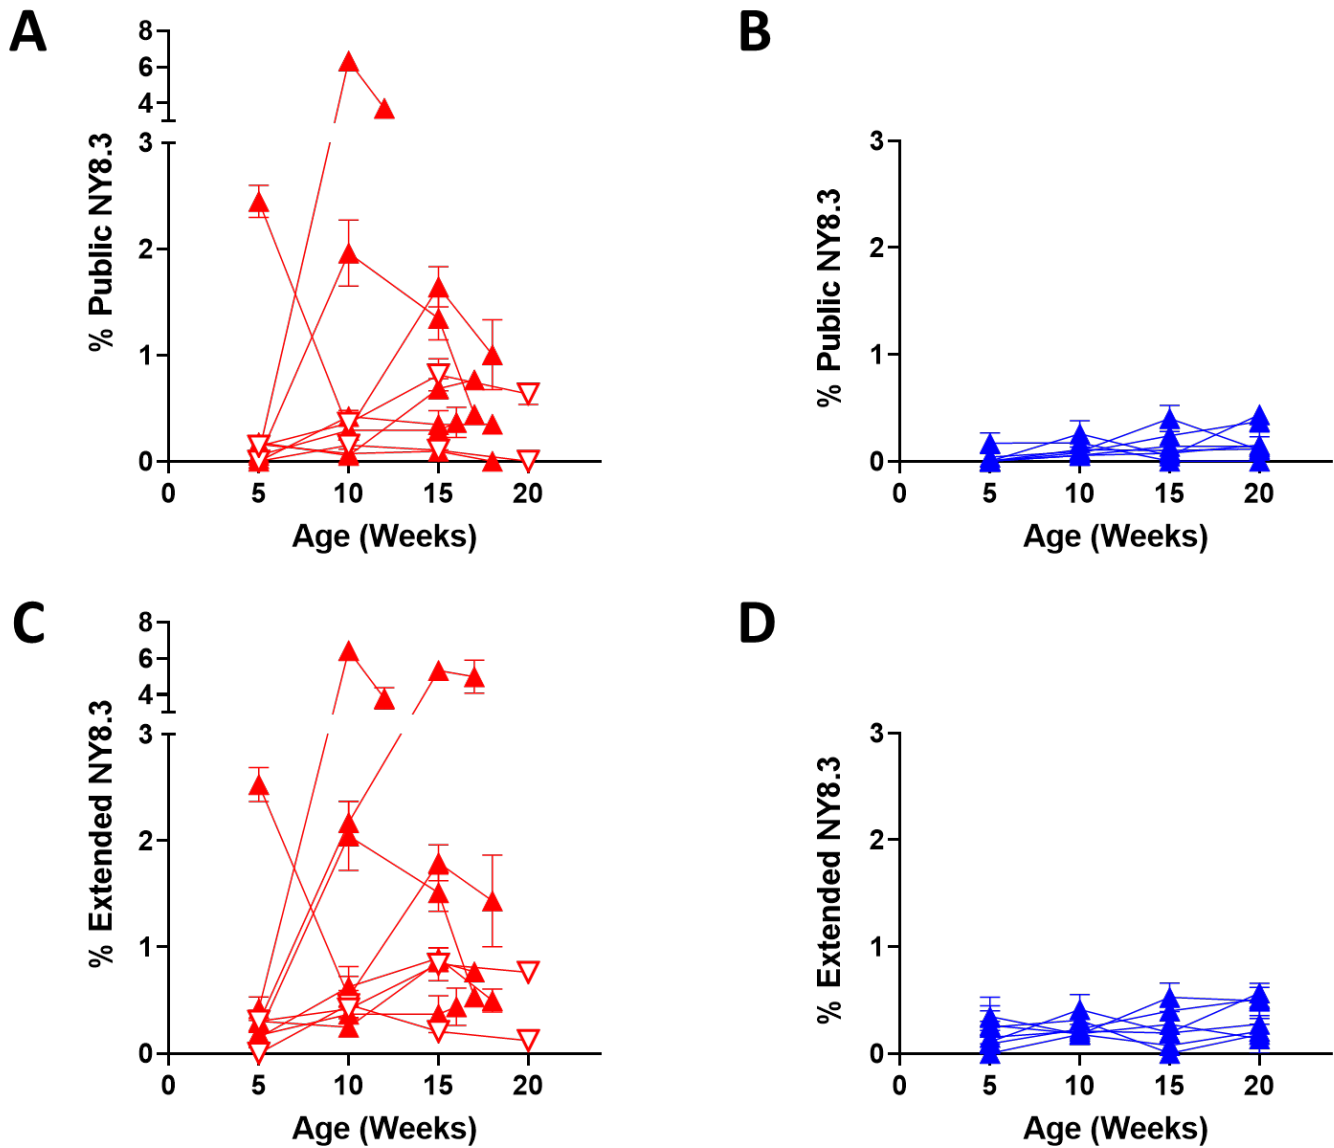

**Supplemental Figure 3: Comparison of TCR beta clonotype frequencies in the islets.** Each graph depicts TCR beta repertoires in the islets of any two given NOD mice studied of the 21 possible pairings. Symbols represent frequency of each unique clonotype of one mouse in X-axis and that of the other mouse in Y-axis. Percentages of clonotypes that were detected in the islets of both mice are shown in red at the right-top corner of each graph.

# Supplemental Figure 4

**Supplemental Figure 4: Frequencies of TCR clonotypes shared between animals in cohorts 2 and 3.** (A) and (B) Percentages of TCR alpha clonotypes detected from different numbers of mice are plotted. Approximately 90% of clonotypes were detected from only a single mouse. (C) and (D) Frequencies of TCR alpha clonotypes detected from different numbers of mice are shown in violin plots. Frequencies of private clonotypes (i.e. detected from only a single mouse) are lower than public clonotypes (i.e. detected from multiple mice).

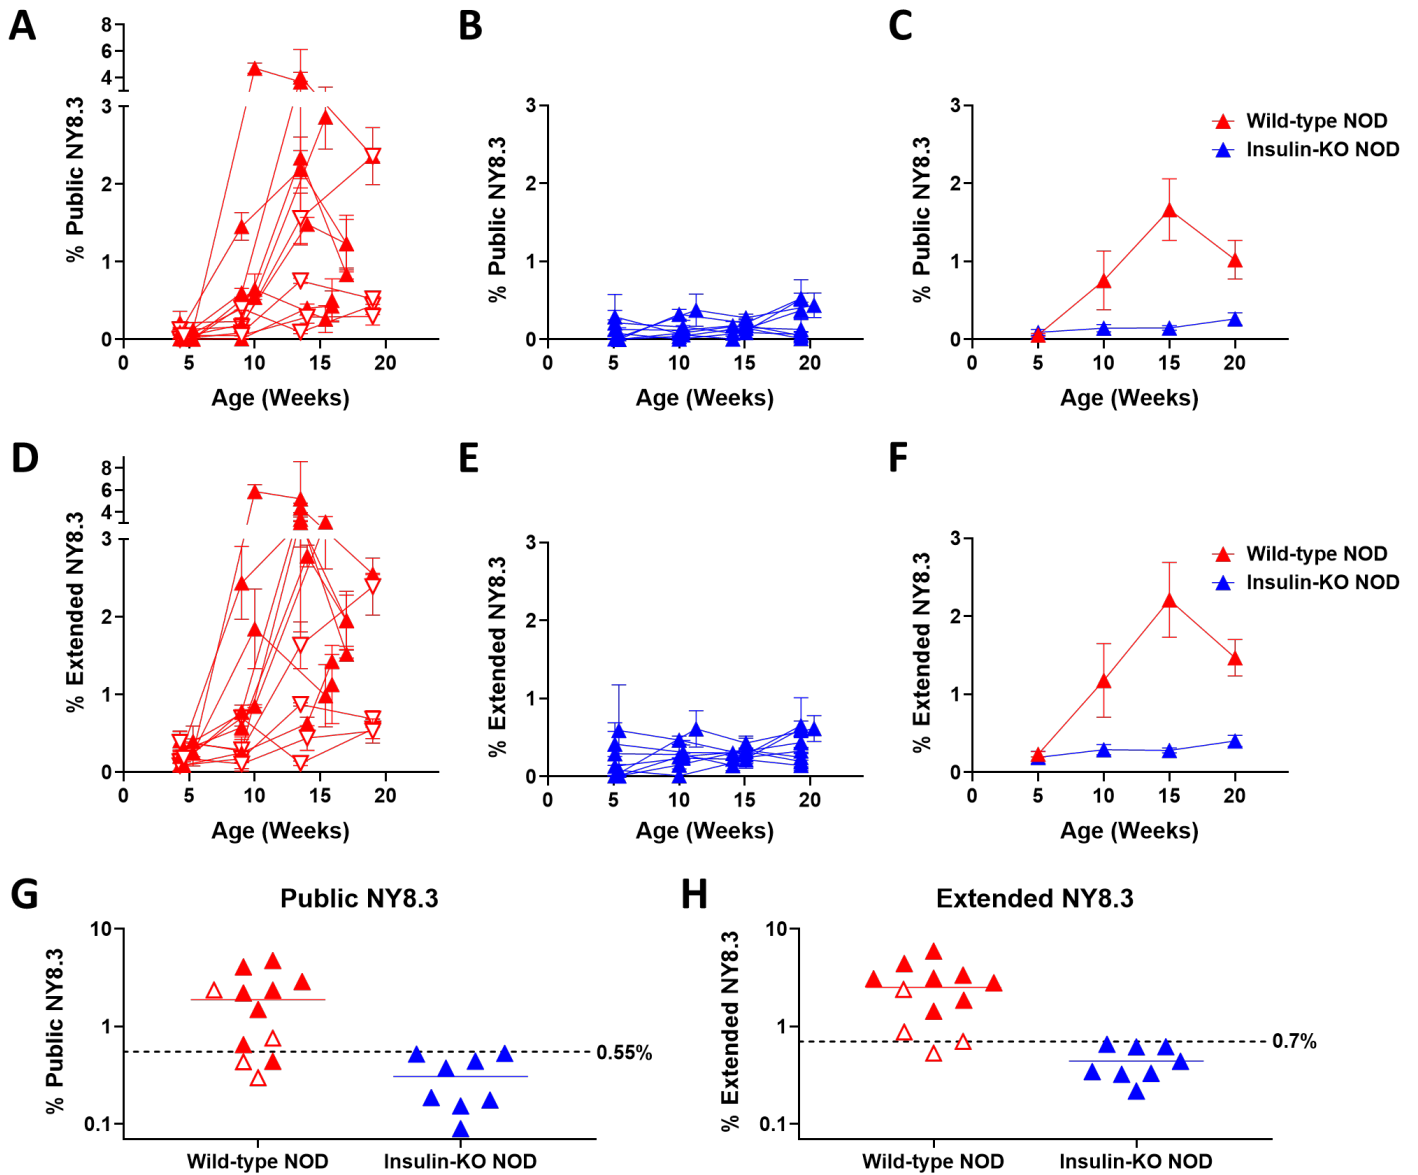

# Supplemental Figure 5

## Supplemental Figure 5: Longitudinal analysis of frequencies of public and extended NY8.3 clonotypes.

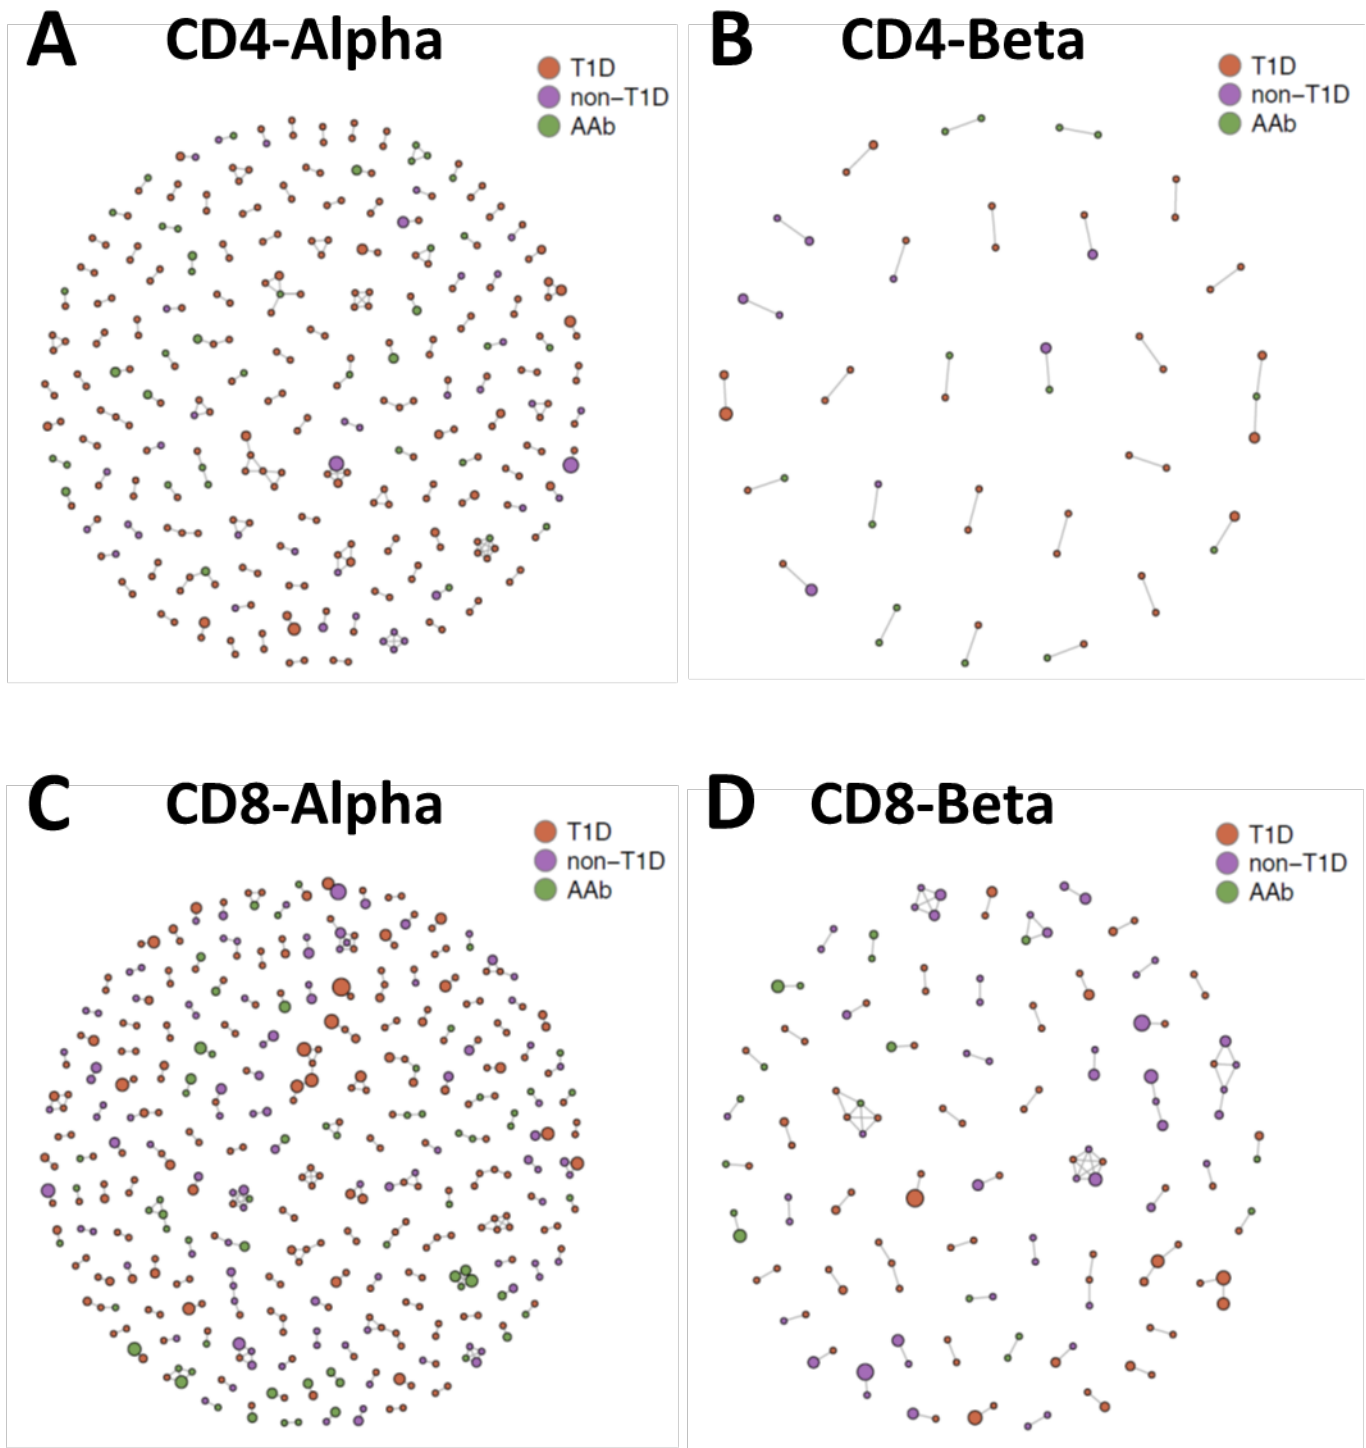

Frequencies of public NY8.3 (A and B) and extended NY8.3 clonotypes (C and D) in blood samples of nine NOD (A and C) and seven insulin-knockout NOD mice were determined using TRAV16-targeted sequencing. Symbols connected by lines represent data from each mouse. White inverse triangle symbols in panels A and C represent data from NOD mice that did not develop diabetes during the study period.

# Supplemental Figure 6

**Supplemental Figure 6: Longitudinal analysis of frequencies of public and extended NY8.3 clonotypes of the second cohorts.** Frequencies of public NY8.3 (A and B) and extended NY8.3 clonotypes (D and E) in blood samples of a cohort of 12 NOD (A and D) and 8 insulin-knockout NOD mice were determined using TRAV16-targeted sequencing. Mean values  $\pm$  standard errors of the public NY8.3 and extended NY8.3 clonotypes of these cohorts are shown in panels C and F, respectively. The highest values of individual mice during the study period are plotted for public NY8.3 (G) and extended NY8.3 (H). The dashed line is the cut-off value determined by the 99 percentile of highest values in insulin-KO mice. White inverse triangle symbols in panels A, D, G, and H represent data from NOD mice that did not develop diabetes during the study period.

# Supplemental Figure 7

**Supplemental Figure 7: Clusters of TCR clonotypes.** TCR clonotypes detected from islets and pancreas tissues were analyzed for similarity using TCRdist. Each bubble represents a unique clonotype from each donor, which is connected to clonotypes having similar motifs. Size of bubbles represents the number of cells expressing a give clonotype.

# Supplemental Table 1

## Supplemental Table 1: Primers to generate whole TCR amplicons

### Alpha chain PCR products sequenced on 454 GSJR

1 <sup>st</sup> step PCR	Primer Name	Primer Sequence
Primer 1	MAC	GGGTGCTGTCCTGAGACCGAGGATC
Primer 2	Universal Primer A Mix	Provided from SMARTer RACE cDNA amplification kit (Takara)
2 <sup>nd</sup> step PCR	Primer Name	Primer Sequence
Primer 1	LibL_MIDsX_MAC	CCATCTCATCCCTGCGTGTCTCCGACTCAG (454 adapter)- XXXXX (barcode)-GTACACAGCAGGTTCTGGGTTCTGG
Primer 2	TitB-RACE	CCTATCCCCTGTGTGCCTTGGCAGTCTCAG (454 adapter)- AAGCAGTGGTATCAACGCAGAGT

### Alpha chain PCR products sequenced on Illumina MiSEQ

1 <sup>st</sup> step PCR	Primer Name	Primer Sequence
Primer 1	MAC	GGGTGCTGTCCTGAGACCGAGGATC
Primer 2	Illumina-UMI	CAGACGTGTGCTCTTCCGATCT-NNNNNNNN (random 6-8mers)- AAGCAGTGGTATCAACGCAGAGT
Primer 3	Illumina-short	CAGACGTGTGCTCTTCCGATCT
2 <sup>nd</sup> step PCR	Primer Name	Primer Sequence
Primer 1	Illumina-MAC-MIDsY	AATGATACGGCGACCACCGAGATCT (Illumina adapter)- ACACTCTTCCCTACACGACGCTCTTCCGATCT (Illumina sequencing primer sequence)-YYYYYYY (barcode)- GTACACAGCAGGTTCTGGGTTCTGG
Primer 2	Illumina-IndexZ	CAAGCAGAAGACGGCATAACGAGAT (Illumina adapter)- ZZZZZZ (barcode)- GTGACTGGAGTTCAGACGTGTGCTCTTCCGATCT (Illumina sequencing primer sequence)

### Beta chain PCR products sequenced on 454 GSJR

1 <sup>st</sup> step PCR	Primer Name	Primer Sequence
Primer 1	MBC3	AGCCCATGGAAGTGCCTTGGCAGCG
Primer 2	Universal Primer A Mix	Provided from SMARTer RACE cDNA amplification kit (Takara)
2 <sup>nd</sup> step PCR	Primer Name	Primer Sequence
Primer 1	LibL_MIDsX_MBC3	CCATCTCATCCCTGCGTGTCTCCGACTCAG (454 adapter)- XXXXX (barcode)- CCTGGCCAAGCACACGAGGG
Primer 2	TitB-RACE	CCTATCCCCTGTGTGCCTTGGCAGTCTCAG (454 adapter)- AAGCAGTGGTATCAACGCAGAGT
