

Supplementary Figure 1. Trametinib down-regulated Tim-3 and Lag-3 of regulatory T cells. Irradiated B6D2F1 recipients were infused with C57BL/6 TCD-BM \pm T cells, and the expression of Tim-3 and Lag-3 on CD4⁺CD25^{high} regulatory T cells were analyzed by flow cytometry. Representative data in three analyses are shown (A), and individual percentages of the positive cells for each molecule are plotted as the means \pm SEM (B). Statistical analyses were performed with the two-sided student's *t* test with Bonferroni correction, and no significant differences were detected.
