

Supplementary Figure 1 (A/B) Nanoparticle Tracking Analysis (NTA) of human plasma extracellular vesicles (EV) at time of presentation with acute myocardial infarction (AMI) and 6 month follow-up ($n = 22$). (C/D) NTA of primary cardiac mouse myocardial endothelial cell EV released under basal and inflammatory stimulated conditions: TNF- α , IL-4 and IL-6 ($n = 3-7$). (E/F) NTA of primary mouse cardiomyocytes produced under basal and inflammatory (TNF- α) stimulated conditions ($n = 6$). Grouped values are means \pm SEM. One-way ANOVA with post-hoc Bonferroni correction, paired and unpaired T-test. ** $P < 0.01$, *** $P < 0.001$.
